There are many different theories of intelligence Although these theories differ in their nuances nearly all agree that there are multiple cognitive abilities and that they differ in the breadth of content they are typically associated with There is much less agreement about the relative importance of cognitive abilities of differing generality for predicting important real world outcomes such as educational achievement career success job performance and health Some investigators believe that narrower abilities hold little predictive power once general abilities have been accounted for Other investigators contend that specific abilities are often as or even more effective in forecasting many practical variables as general abilities These

disagreements often turn on differences of theory and methodology that are both subtle and complex The five cutting edge contributions in this volume both empirical and theoretical advance the conversation in this vigorous and highly important scientific debate

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends
