(eds.), 2021-06-28

Bycatch a term widely used to refer to part of the catch unintentionally caught during a fishing operation in addition to target species and consisting of the discards and incidental catch of vulnerable species is considered one of the most important threats to the profitability and sustainability of fisheries as well as to the conservation of the marine environment and ecosystems Understanding the bycatch issue and adopting effective measures in order to reduce bycatch rates are essential steps towards minimizing the impacts on vulnerable species and ensuring both a sustainable fisheries sector and healthy seas In the Mediterranean and the Black Sea the incidental catch of vulnerable species namely seabirds sea turtles elasmobranchs marine mammals and macrobenthic invertebrates represents one of several challenges for the industrial semi industrial and small scale fisheries that coexist in the region as well as for the diverse and sensitive ecosystems impacted Typically data on this issue have been collected in an opportunistic manner and in ways that make comparisons difficult The annual absolute values of incidental catch of vulnerable species are not available studies cover only a small portion of the total fishing activity and often present important knowledge gaps for many types of fishing gear countries and or subregions as well as on temporal scales for example to establish reliable baselines The result is that little is known of the scope of the problem despite incidental catch being a significant pressure on the populations of vulnerable species as well as a concern for fishers This regional review is an attempt to compile in one single document all available data and historical records on the incidental catch of vulnerable species in the Mediterranean and Black Sea fisheries obtained from existing literature databases and other grey sources and collated in a standardized and

comparable way The main objective is to provide comprehensive baseline information earmark the main data gaps as well as identify the most impacting types of fishing gear by taxonomic group This work is a reminder of the importance of standardized data collection and the need to have baseline information in order to support decision making in the identification of appropriate bycatch mitigation techniques thus enabling analysis of their effectiveness and comparison over time and space as well as facilitating the implementation of relevant conservation and or management measures at the national subregional and regional levels **The Patagonian Shelfbreak Front** E. Marcelo Acha,Oscar Osvaldo Iribarne,Alberto Piola,2024-11-12 This book provides a compilation of basic information on the topic of the Patagonian Shelfbreak front but integrally reanalyzes this under modern paradigms The book provides a synthesis of the ecosystem characteristics encompassing physical and chemical oceanography plankton nekton and benthos communities fisheries and conservation issues It provides hypothesis to guide future research and recommendations for policymakers and stakeholders Fronts play key roles in marine ecosystems and shelfbreak fronts are ubiquitous elsewhere in the world ocean broadening the interest of our proposal The Patagonian shelfbreak front is a hot spot of marine life with several associated fisheries and intensive use by marine birds and mammals This book will contribute to fill the information gap of the Southwestern Atlantic a region where there is a growing interest in terms of conservation and management actions Its primary audience are researchers and postgraduate students being also relevant for conservation scientists and resource managers
