Intelligent Problem Solving.
Methodologies and Approaches Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area

 NEO 2016 workshop held in September 2016 in Tlalnepantla Mexico The development of powerful search and optimization
 techniques is of great importance in today s world and requires researchers and practitioners to tackle a growing number of
 challenging real world problems In particular there are two well established and widely known fields that are commonly
 applied in this area i traditional numerical optimization techniques and ii comparatively recent bio inspired heuristics Both
 paradigms have their unique strengths and weaknesses allowing them to solve some challenging problems while still failing
 in others The goal of the NEO workshop series is to bring together experts from these and related fields to discuss compare
 and merge their complementary perspectives in order to develop fast and reliable hybrid methods that maximize the
 strengths and minimize the weaknesses of the underlying paradigms In doing so NEO promotes the development of new
 techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding and adequate
 treatment of real world problems particularly in emerging fields that affect all of us such as healthcare smart cities big data
 among many others The extended papers presented in the book contribute to achieving this goal **Infrastructure**
Design, Signalling and Security in Railway Xavier Perpinya,2012-04-04 Railway transportation has become one of the
 main technological advances of our society Since the first railway used to carry coal from a mine in Shropshire England 1600
 a lot of efforts have been made to improve this transportation concept One of its milestones was the invention and
 development of the steam locomotive but commercial rail travels became practical two hundred years later From these first
 attempts railway infrastructures signalling and security have evolved and become more complex than those performed in its
 earlier stages This book will provide readers a comprehensive technical guide covering these topics and presenting a brief
 overview of selected railway systems in the world The objective of the book is to serve as a valuable reference for students
