only involve products or services that are changed for a local market by simple substitution or the omitting of functions. Products and services need to be addressed that ensure a high standard of living everywhere. Resources required for manufacturing and use of such products are limited and not evenly distributed in the world. Locally available resources, local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle. The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas.

Higher Engineering Mathematics

John Bird, 2007-03-14. John Bird's approach based on numerous worked examples and interactive problems is ideal for students from a wide range of academic backgrounds and can be worked through at the student's own pace. Basic mathematical theories are explained in the simplest of terms supported by practical engineering examples and applications from a wide variety of engineering disciplines to ensure the reader can relate the theory to actual engineering practice. This extensive and thorough topic coverage makes this an ideal text for a range of university degree modules: Foundation Degrees and HNC/D units. An established text which has helped many thousands of students to gain exam success, now in its fifth edition, Higher Engineering Mathematics has been further extended with new topics to maximise the book's applicability for first year engineering degree students and those following Foundation Degrees. New material includes inequalities, differentiation of parametric equations, differentiation of hyperbolic functions and homogeneous first order differential equations. This book also caters specifically for the engineering mathematics units of the Higher National Engineering schemes from Edexcel, including the core unit Analytical Methods for Engineers and the two specialist units Further Analytical Methods for Engineers and Engineering Mathematics, in their entirety common to both the electrical/electronic engineering and mechanical engineering pathways. A mapping grid is included showing precisely which topics are required for the learning outcomes of each unit for ease of reference. The book is supported by a suite of free web downloads: Introductory level algebra. To enable students to revise basic algebra needed for engineering courses, available at <http://books.elsevier.com/companions/9780750681520>. Instructor's Manual. Featuring full worked solutions and mark scheme for all 19 assignments in the book and the remedial algebra assignment, available on <http://www.textbooks.elsevier.com> for lecturers only.
