Solution of Superlarge Problems in Computational Mechanics James H. Kane, 2012-12-06 There is a need to solve problems in solid and fluid mechanics that currently exceed the resources of current and foreseeable supercomputers The issue revolves around the number of degrees of freedom of simultaneous equations that one needs to accurately describe the problem and the computer storage and speed limitations which prohibit such solutions The goals of this symposium were to explore some of the latest work being done in both industry and academia to solve such extremely large problems and to provide a forum for the discussion and prognostication of necessary future directions of both man and machine As evidenced in this proceedings we believe these goals were met Contained in this volume are discussions of iterative solvers and their application to a variety of problems e g structures fluid dynamics and structural acoustics iterative dynamic substructuring and its use in structural acoustics the use of the boundary element method both alone and in conjunction with the finite element method the application of finite difference methods to problems of incompressible turbulent flow and algorithms amenable to concurrent computations and their applications Furthermore discussions of existing computational shortcomings from the big picture point of view are presented that include recommendations for future work

of the dynamic response of materials and structures to impulse primary blast impact involving everything from car and aircraft collisions to impacts of space structures by assorted debris. The understanding of hydrocodes requires knowledge of numerical methods in the code as well as a keen understanding of the physics of the problem being addressed. This can take many years to learn via codes. There are currently a number of titles addressing the physics of high pressure and high rate material but nothing introducing the novice to the fundamentals of this highly technical and complicated study. Introduction to Hydrocodes bridges the gap bringing together the large body of literature scattered through diverse journals, government and corporate reports, and conference proceedings. As valuable as the text are the cited references, and the combination will take years off the preparation time of future code users. Introduces complex physics essential for the understanding of hydrocodes. Infused with over 30 years practical experience in the field. Brings together a wide range of literature saving valuable research time.

Review of Progress in Quantitative Nondestructive Evaluation Donald O. Thompson, Dale E. Chimenti, 2012-12-06. In this volume, parts 1 and 2 are contained the edited papers presented at the annual Review of Progress in Quantitative NDE held at the University of California San Diego August 1-6, 1982. This Review, possibly the most comprehensive annual symposium emphasizing both ongoing research and applications in quantitative NDE, was sponsored by the Center for Advanced NDE at the Ames Laboratory of the U.S. Department of Energy in cooperation with the Materials Laboratory of the Air Force Wright Aeronautical Laboratories and the Defense Advanced Research Projects Agency. Over 300 attendees representing various government agencies and the industrial and university communities participated in the technical presentations, poster sessions, and discussions. The symposium benefited from the insight of two keynote speakers: Dr. Harris Burte of the Materials Laboratory AFWAL and Mr. Ward Rummel of the Martin Marietta Corporation, who presented complementary messages. Dr. Burte pointed out the need to identify windows to serve as guides for focusing NDE research. The window concept may be thought of as an opportunity for the application of NDE technology to an important problem, and through this application to identify knowledge gaps which must be filled by generic research. This concept simultaneously provides a mechanism for the solution of a direct application problem and a set of strong guidelines for generic research directions. Mr. Rummel called attention to the value of lessons learned from war.
