Antenna Patterns from Single Slots in Carbon Fibre Reinforced Plastic Waveguides ,2010 Slotted Waveguide Antenna Stiffened Structure SWASS is a type of conformal load bearing antenna where top hat cross section stiffeners on skins or blade stiffeners in sandwich panels serve the dual purpose of acting both as structural stiffeners and as waveguides

Cutting slots through the outer skin and into these waveguide stiffeners creates slotted waveguide antenna arrays Two of the key requirements for SWASS are adequate antenna performance and the capability to design SWASS antenna arrays The first step toward this goal and the subject of this report was to satisfy these requirements for single slot antennas Eight 100 mm long waveguide antennas with internal cross section of 22.86 mm x 10.16 mm and a single slot were manufactured from aerospace grade carbon fibre reinforced plastic CFRP Two slotted waveguide antennas were also manufactured from copper rigid rectangular WR 90 waveguide Antenna gain in the bore sight direction from 8 to 12 GHz and the E and H plane antenna pattern at 10 GHz were measured for each slotted waveguide The radiation pattern of CFRP antennas was similar to that of copper antennas with approximately 3 dB reduction in gain Measured behaviour correlated well with the predictions made using CST Microwave Studio Discrepancies of up to 2 dB occurred at frequencies above 10 GHz It is concluded that losses due to the finite conductivity of CFRP are acceptable for first generation SWASS and simulation accuracy is sufficient for initial array design

Scientific and Technical Aerospace Reports, 1984 *Radar Technology* Guy Kouemou, 2010-01-01 In this book Radar Technology the chapters are divided into four main topic areas Topic area 1 Radar Systems consists of chapters which treat whole radar systems environment and target functional chain Topic area 2 Radar Applications shows various applications of radar systems including meteorological radars ground penetrating radars and glaciology Topic area 3 Radar Functional Chain and Signal Processing describes several aspects of the radar signal processing From parameter extraction target detection over tracking and classification technologies Topic area 4 Radar Subsystems and Components consists of design technology of radar subsystem components like antenna design or waveform design

Compact Slot Array Antennas for Wireless Communications Alan J. Sangster, 2018-11-11 This book describes and provides design guidelines for antennas that achieve compactness by using the slot radiator as the fundamental building block within a periodic array rather than a phased array It provides the basic electromagnetic tools required to design and analyse these novel antennas with sample calculations where relevant The book presents a focused introduction and valuable insights into the relevant antenna technology together with an overview of the main directions in the evolving technology of compact planar arrays While the book discusses the historical evolution of compact array antennas its main focus is on summarising the extensive body of literature on compact antennas With regard to the now ubiquitous slot radiator it seeks to demonstrate how despite significant antenna size reductions that at times even seem to defy the laws of physics desirable radiation pattern properties can be preserved This is supported by an examination of recent advances in frequency selective surfaces and in metamaterials which can if handled correctly be used to facilitate physics defying designs The book offers a valuable source of information for communication systems and antenna design engineers especially thanks to its overview of trends in compact planar arrays yet will also be of interest to students and researchers as it provides a focused introduction and insights into this highly relevant antenna technology
