Cloud Computing A Beginner's Guide to Expertise Manish Soni, 2024-11-26 This book Cloud Computing A Beginner's Guide to Expertise is designed to demystify cloud computing and provide a comprehensive introduction to this transformative technology. Whether you are a student, a professional looking to upskill, or simply someone curious about the cloud, this guide will take you from the basics to a deeper understanding of cloud architecture, services, and deployment models. We begin with an overview of the fundamental concepts, including the definition of cloud computing, its history, and the key players in the industry. As we progress, you will learn about different cloud service models: Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS), and how they can be leveraged to meet various business needs. Practical examples and real-world case studies are included to help you see how cloud computing is applied in different industries. You will also find hands-on exercises to practice your skills and deepen your understanding. New Trends in Intelligent Software Methodologies, Tools and Techniques H. Fujita, E. Herrera-Viedma, 2018-09-18 Knowledge-based systems fully integrated with software have become essential enablers for both science and commerce. But current software methodologies, tools, and techniques are not robust or reliable enough for the demands of a constantly changing and evolving market, and many promising approaches have proved to be no more than case-oriented methods that are not fully automated. This book presents the proceedings of the 17th international conference on New Trends in Intelligent Software Methodology Tools and Techniques (SoMeT18) held in Granada, Spain, 26-28 September 2018. The SoMeT conferences provide a forum for the exchange of ideas and experience, foster new directions in software development methodologies and related tools and techniques, and focus on exploring innovations, controversies, and the current challenges facing the software engineering community. The 80 selected papers included here are divided into 13 chapters and cover subjects as diverse as intelligent software systems, medical informatics, and bioinformatics, artificial intelligence techniques, social learning, software and sentiment analysis, cognitive systems, and neural analytics, and security, among other things. Offering a state-of-the-art overview of methodologies, tools, and techniques, this book will be of interest to all those whose work involves the development or application of software.

Energy Manual Manfred Hegger, Matthias Fuchs, Thomas Stark, Martin Zeumer, 2012-12-10. W hrend die Effizienz und Nachhaltigkeitsoffensive in den meisten Wirtschaftsbereichen in vollem Gang ist, steht das Bauen damit noch ganz am Anfang. konomisch wie kologisch. Die Politik auf globaler, europäischer und nationaler Ebene nimmt sich dieses Defizits inzwischen zunehmend an und versucht es durch rechtliche Anforderungen und Gesetze wie EnEV, Gebäudesertifizierungen und Wettbewerbe wettzumachen. Der Energie Atlas gibt in der bew hrten Form der Atlanten eine umfassende Darstellung der konstruktiven Parameter von Energieeffizienz und Nachhaltigkeit wieder. Er nimmt die von der EU geplanten gesetzlichen Regulierungen vorweg und weist als unmittelbar

verwendbare Arbeitshilfe für die tägliche Arbeit von Architekten Ingenieuren und Designern den Weg zu effizientem und nachhaltigem Bauen und Betreiben von Gebäuden Mit seiner Orientierung am gesamten Lebenszyklus eines Gebäudes leistet er eine ganzheitliche Betrachtung eine unverzichtbare Voraussetzung für nachhaltiges Wirtschaften *Control-Theoretic Models of Feedforward in Manual Control* Frank M. Drop, 2016-11-03 Understanding how humans control a vehicle cars aircraft bicycles etc enables engineers to design faster safer more comfortable more energy efficient more versatile and thus better vehicles In a typical control task the Human Controller HC gives control inputs to a vehicle such that it follows a particular reference path e.g. the road accurately The HC is simultaneously required to attenuate the effect of disturbances e.g. turbulence perturbing the intended path of the vehicle To do so the HC can use a control organization that resembles a closed loop feedback controller a feedforward controller or a combination of both Previous research has shown that a purely closed loop feedback control organization is observed only in specific control tasks that do not resemble realistic control tasks in which the information presented to the human is very limited In realistic tasks a feedforward control strategy is to be expected yet almost all previously available HC models describe the human as a pure feedback controller lacking the important feedforward response Therefore the goal of the research described in this thesis was to obtain a fundamental understanding of feedforward in human manual control First a novel system identification method was developed which was necessary to identify human control dynamics in control tasks involving realistic reference signals Second the novel identification method was used to investigate three important aspects of feedforward through human in the loop experiments which resulted in a control theoretical model of feedforward in manual control The central element of the feedforward model is the inverse of the vehicle dynamics equal to the theoretically ideal feedforward dynamics However it was also found that the HC is not able to apply a feedforward response with these ideal dynamics and that limitations in the perception cognition and action loop need to be modeled by additional model elements a gain a time delay and a low pass filter Overall the thesis demonstrated that feedforward is indeed an essential part of human manual control behavior and should be accounted for in many human machine applications **The Principal's Field Manual** Michael B.
