Intelligent Environments P.

Droege,1997-03-20 The environment as modified and created by people is largely about the use of information its generation and exchange How do recent innovations in the technologies of information management and communication affect our use of space and place and the way we perceive and think about our surroundings This volume provides an international exploratory forum for the complex phenomenon of new information and communication technology as it permeates and transforms our physical world and our relation to it the architectural definition of our surrounding geographical space urban form and immediate habitats This book is a reader an attempt at registering disciplinary changes in context at tracing subtexts for which most mainstream disciplines have no established language The project is to give voice to an emerging meta discipline that has its logic across the specializations A wide range of professionals and academics report findings views and ideas Together they describe the architecture of a postmodern paradigm how swiftly mutating the proliferating technology applications have begun to interact with the construction and reading of physical space in architecture economics geography history planning social sciences transport visual art but also in the newer domains that have joined this spectrum through the very nature of their impacts information technology and telecommunications The space navigated in this volume is vast both in physical terms and in its virtual and analogous form It ranges from the space that immediately encompasses or is simulated to encompass the human body as in buildings and virtual tectonics to that of towns and regions We stay clear of molecular scale space and of dimensions that are larger than earth **The Bibliographer's Manual of English Literature**
