interventional or surgical treatment of renal vascular diseases or their consequences e.g. arterial hypertension. In this volume we have added a chapter on the usefulness of knowledge of anatomy and anatomical variants in endovascular therapies or renal transplantation. We also presented an updated approach on paraclinical diagnostic techniques of the various renal vessels pathologies. This book offers current protocols for treating renal artery or vein thrombosis using or not combinations of the new antithrombotics. As new data emerged concerning percutaneous interventions for renal artery stenosis we comprehensively analyze published clinical trials to highlight the role of transcatheter renal artery stenting in contemporary cohorts of patients. Given the recent news regarding the updated techniques and the evidence supporting the indications of renal denervation in resistant hypertension, this volume dedicates three chapters to the new devices, indications from 2023 and extra hypertensive uses of RDN.
