Customized Artificial Implants: Bionic Design and Multiscale Evaluation Zhenxian Chen, Yongtao Lyu, Junyan Li, Xijin Hua, 2024-05-24 Artificial implants have been commonly used to replace or fix damaged tissue in orthopedics. However, due to the inter-individual differences and the complexities of anatomical structures and load conditions, traditional implants cannot meet the clinical requirements. In recent years, questions relating to customized artificial implants have been getting more and more attention from the research community. Challenges to implementing precision design and evaluation arise not only from the design need of considering bionic structures, kinematical function, mechanical performances, and biological functional similarity, but also from the multiscale comprehensive evaluation; the latter involves biomechanics and biotribology of musculoskeletal systems from macro musculoskeletal multibody dynamics to micromechanics of porous structures. Established analysis technologies such as musculoskeletal multibody dynamics modeling and neuromusculoskeletal modeling are being well developed and evolved through combining coupling with finite element analyses and more recently by novel artificial intelligence approaches.

50 Years Of The Renormalization Group: Dedicated To The Memory Of Michael E Fisher Amnon Aharony, Ora Entin-wohlman, David A Huse, Leo Radzihovsky, 2024-07-26 The contributions in the book are devoted to the memory of Michael E Fisher and hence include many personal memories from people whose work was influenced by him. Also, the book is a collection of articles from leaders in the field of phase transitions and critical phenomena to celebrate 50 years of the renormalization group and the 1972 paper by Wilson and Fisher. Many of the articles review in tutorial form the progress in the fields of phase transitions and the renormalization group.

Quality and Regulation in Health Care Robert Dingwall, Paul Fenn, 2022-11-30 First published in 1992, *Quality and Regulation in Health Care* employs socio-legal ideas concerning regulation to examine the methods used to influence the quality of health care in the US, UK, and Western Europe. Throughout the Western world, health care systems, both public and private, are grappling with the problems of assuring quality while containing costs. On the one hand, governments and insurers argue that there must be some limit to the apparently endless growth of health care expenditures. On the other, patient groups and consumer advocates, already dissatisfied by the problems in holding doctors accountable for their actions, protest that such limits must not result in sick people getting inferior treatment. This book examines in detail the debate surrounding the question: How can the professional expertise of the clinicians be reconciled with the preferences of their patients and the economic concerns of taxpayers or insurers? It will be essential reading for graduate and undergraduate courses in health policy, medical sociology, and health law.

From Gravity to Thermal Gauge Theories: The AdS/CFT Correspondence Eleftherios Papantonopoulos, 2011-03-27 The AdS/CFT correspondence is a powerful tool in studying strongly coupled phenomena in gauge field theories using results from a weakly coupled gravity background studied in the realm of string theory. AdS/CFT was first successfully applied to the study of phenomena such as the quark-gluon plasma produced in heavy ions collisions. Soon it was realized that its applicability can be extended in a more phenomenological approach to condensed matter.

systems and to systems described by fluid dynamics The set of tutorial reviews in this volume is intended as an introduction to and survey of the principle of the AdS CFT correspondence in its field string theoretic formulation its applicability to holographic QCD and to heavy ions collisions and to give a first account of processes in fluid dynamics and condensed matter physics which can be studied with the use of this principle Written by leading researchers in the field and cast into the form of a high level but approachable multi author textbook this volume will be of benefit to all postgraduate students and newcomers from neighboring disciplines wishing to find a comprehensive guide for their future research

Quantum Phase Transitions Subir Sachdev, 2011-04-07. Describing the physical properties of quantum materials near critical points with long range many body quantum entanglement, this book introduces readers to the basic theory of quantum phases, their phase transitions and their observable properties. It also contains several new chapters to cover important recent advances such as the Fermi gas near unitarity, Dirac fermions, Fermi liquids and their phase transitions, quantum magnetism and solvable models obtained from string theory. After introducing the basic theory, it moves on to a detailed description of the canonical quantum critical phase diagram at non zero temperatures. Finally, a variety of more complex models are explored. This book is ideal for graduate students and researchers in condensed matter physics and particle and string theory.

Simulation and Experiment in Laser Metrology Zoltan Füzessy, Werner Jüotner, Wolfgang Osten, 1996. These proceedings document about 45 contributions to the International Symposium on Laser Applications in Precision Measurement held in Balatonfured, Hungary during June 3-6, 1996. Special emphasis was given to the Combination of Simulation and Experiment in Laser Metrology. International experts provide a survey over a large variety of their latest achievements and developments in this rapidly advancing field. Over the last years, optical measurement techniques like structured illumination, holographic interferometry and tomography were applied more and more in combination with CAE tools such as CAD and FEM. This combination has found a world of new applications in scientific and industrial branches interested in highly exact but nondestructive and noncontact measurement of technical components. Each of the four sections contains an overview article given by international leading experts. With
