Uss Steel Design Manual:

Ultimate Limit State Design of Steel-Plated Structures Jeom Kee Paik, Anil Kumar Thayamballi, 2003-03-28 Steel plated structures are important in a variety of marine and land based applications including ships offshore platforms power and chemical plants box girder bridges and box girder cranes The basic strength members in steel plated structures include support members such as stiffeners and plate girders plates stiffened panels grillages and box girders During their lifetime the structures constructed using these members are subjected to various types of loading which is for the most part operational but may in some cases be extreme or even accidental Ultimate Limit State Design of Steel Plated Structures reviews and describes both fundamentals and practical design procedures in this field The derivation of the basic mathematical expressions is presented together with a thorough discussion of the assumptions and the validity of the underlying expressions and solution methods Particularly valuable coverage in the book includes Serviceability and the ultimate limit state design of steel structural systems and their components The progressive collapse and the design of damage tolerant structures in the context of marine accidents Age related structural degradation such as corrosion and fatigue cracks Furthermore this book is also an easily accessed design tool which facilitates learning by applying the concepts of the limit states for practice using a set of computer programs which can be downloaded In addition expert guidance on mechanical model test results as well as nonlinear finite element solutions sophisticated design methodologies useful for practitioners in industries or research institutions selected methods for accurate and efficient analyses of nonlinear behavior of steel plated structures both up to and after the ultimate strength is reached is provided Designed as both a textbook and a handy reference the book is well suited to teachers and university students who are approaching the limit state design technology of steel plated structures for the first time The book also meets the needs of structural designers or researchers who are involved in civil marine and mechanical engineering as well as offshore engineering and naval architecture

Steel Designers' Handbook 8th Edition Branko Gorenc, Gorenc B Tinyou R Syam a, 2013-03 The Revised 8th Edition of Steel Designers Handbook is an invaluable tool for all practising structural civil and mechanical engineers as well as engineering students at university and TAFE in Australia and New Zealand It has been prepared in response to changes in the design Standard AS 4100 the structural Design Actions Standards AS ANZ 1170 other processing Standards such as welding and coatings updated research as well as feedback from users This edition is based on Australian Standard AS 4100 1998 and subsequent amendments The worked numerical examples in the book have been extensively revised with further examples added The worked examples are cross referenced to the relevant clauses in AS 4100 1998
