Vaccine Safety Manual:

Vaccine Safety Manual for Concerned Families and Health Practitioners Neil Z. Miller, 2008-04-01 The Vaccine Safety Manual is the world's most complete guide to immunization risks and protection. It includes pertinent information on every major vaccine: polio, tetanus, MMR, hepatitis A, B, HPV, cervical cancer, Hib, Flu, chickenpox, shingles, rotavirus, pneumococcal, meningococcal, RSV, DTaP, anthrax, smallpox, TB, and more. All of the information, including detailed vaccine safety and efficacy data, is written in an easy-to-understand format yet includes more than 1,000 scientific citations. More than 75 charts, graphs, and illustrations supplement the text. This encyclopedic health manual is an important addition to every family's home library and will be referred to again and again. **CIOMS Guide to Active Vaccine Safety Surveillance** Council for International Organizations of Medical Sciences (CIOMS), 2017-01-13 This guide addresses the situation facing many resource-limited countries' national immunization programmes and regulatory authorities around the globe when a new vaccine is being introduced into a country for the first time ever and vaccine safety needs to be assured. The latest CIOMS Working Group on Vaccine Safety WG was created to continue addressing unmet needs in the area of vaccine pharmacovigilance and specifically address Objective 8 of WHO's Global Vaccine Safety Initiative regarding public-private information exchange. The earlier CIOMS WHO Working Group on Vaccine Pharmacovigilance 2005-2012 focused on supporting surveillance of vaccine safety globally and the evolving need for a harmonized view on terminology and case definitions and published *Definitions and Application of Terms for Vaccine Pharmacovigilance*. Report of the CIOMS WHO Working Group 2012. With more vaccine solutions available and opportunities for earlier availability of new vaccine products in resource-limited countries, e.g. vaccines against rotavirus, human papillomavirus, or pneumococci, as well as new products that address diseases endemic in those countries only, e.g. malaria, dengue, among others, generating reliable data about specific safety concerns is becoming a priority for all countries. The guide offers a practical step-by-step approach and algorithm to aid immunization professionals and decision makers in determining the best course of action if additional vaccine safety data is needed. The guide provides a structured process for evaluating whether significant knowledge gaps exist, whether passive safety surveillance is adequate, and if not, methods for and practical aspects of conducting active vaccine safety surveillance. The guide also includes an essential vaccine information source list for evaluating the extent of data resources and several case studies for review. This CIOMS publication, more than any other in recent history, focuses on the special needs of the country-level organizations responsible for developing vaccines, safety surveillance strategies, and implementing new vaccination programmes into resource-limited environments. **CIOMS Guide to Vaccine Safety Communication** Council for International Organizations of Medical Sciences (CIOMS), 2018-05-05 The CIOMS Guide to Vaccine Safety Communication provides an overview of strategic communication issues faced by medicines regulators, those responsible for vaccination policies and programmes, and other stakeholders when dealing with the launch of newly

developed vaccines for the first time to market the introduction of current or underutilized vaccines into new countries regions or populations and the handling of any new safety issue arising during the life cycle of a vaccine Sourcing from existing guidance documents and compiling recommendations relevant from a regulatory perspective the Guide provides a common ground in a way that has not been achieved otherwise at global level The Guide stresses the fundamental importance of regulatory bodies having a system in place with skilled persons who can efficiently run vaccine safety communication in collaboration with stakeholders It presents information and examples with colour coding for quick access to three levels of guidance and offers a CIOMS template to use to create a Vaccine Safety Communication Plan In 2017 the CIOMS Working Group on Vaccine Safety WG issued a report CIOMS Guide to Active Vaccine Safety Surveillance Guide AVSS offering a practical step by step approach and a graphic algorithm to aid immunization professionals and decision makers in determining the best course of action when confronting such challenges This new CIOMS Guide to Vaccine Safety Communication stemmed from topic group 3 of the same WG which brought together in a unique forum pharmacovigilance specialists and other experts from regulatory and public health authorities the World Health Organization and academia as well as manufacturers in emerging and industrialized countries It presents recommendations for vaccine safety communication with a specific focus on regulatory bodies A number of communication guidance documents already exist for immunization programmes covering how to manage communication when an adverse event occurs Few have thus far been issued addressing the specific needs of regulatory bodies whether they be established authorities in high income countries or developing authorities in resource limited countries Little has been published for these groups in relation to communication about risks uncertainties safety and safe use of the vaccine products they license This CIOMS report aims to fill this gap
