One of the most intriguing questions about the new computer technology that has appeared over the past few decades is
whether we humans will ever be able to make computers learn As is painfully obvious to even the most casual computer user
most current computers do not Yet if we could devise learning techniques that enable computers to routinely improve their
performance through experience the impact would be enormous The result would be an explosion of new computer
applications that would suddenly become economically feasible e g personalized computer assistants that automatically tune
themselves to the needs of individual users and a dramatic improvement in the quality of current computer applications e g
imagine an airline scheduling program that improves its scheduling method based on analyzing past delays And while the
potential economic impact of successful learning methods is sufficient reason to invest in research into machine learning
there is a second significant reason studying machine learning helps us understand our own human learning abilities and
disabilities leading to the possibility of improved methods in education While many open questions remain about the methods
by which machines and humans might learn significant progress has been made *Torpedoman's Mate 3 & 2* United States.
