An Introduction to Statistics using Microsoft Excel 2nd Edition Dan Remenyi, George Onofrei, Joseph English, 2015-05-26 The handling of numbers in arithmetic and the progression into the more abstract field of mathematics and statistics is generally approached poorly in our education system The inadequacy is not necessarily in the teaching techniques or the books and other text used but rather in the attitude towards these subjects These subjects are seen as something which has to be taught because it is part of a preordained curriculum rather than a set of tools which are available to help people live a fuller more productive and more interesting life It is so enlightening when one hears people say I thought that when I left school I was leaving all the maths stuff behind me or I was bored witless by all those numbers and formulas sic that were forced down my throat This book was written out of a frustration at seeing statistics taught through formal methods using large scale statistic software packages It seemed to me that very little was learned by this process and quite often both the teachers and the students were in denial It is true that the students were generally able to pick up enough knowledge to pass an examination or to complete a piece of research But I seldom saw anything which could be regarded as deep learning and the little which had been learned did not stay for any length of time in the heads of these learners I know people who have passed several university level courses in statistics and they can hardly recall never mind use any of what was taught to them

Food Safety and the WTO: The Interplay of Culture, Science and Technology Marsha Echols, 2001-11-16 Today s international trade regime explicitly rejects cultural perceptions of what is

safe to eat overturning millennia of tradition The World Trade Organization WTO Agreement on the Application of Sanitary and Phytosanitary Measures SPS enshrines science as the arbiter in resolving disputes involving this vital human need This mandate however is under attack from many quarters Critics cite environmental and ethical concerns unpredictably changing technology taste food preferences local culture adequacy of governmental implementation of WTO standards and the reliability of scientific opinion A basic conflict has crystallized food as culture versus food as commerce The WTO SPS approach is increasingly challenged for its balance in favor of economic considerations and for its visible undermining of unique cultural identities This important book explores the relationship between the SPS Agreement food traditions science and technology It deliberately confronts those trade experts who refuse to allow other social sciences to influence their economics based trade theory The author ably investigates the local perception of food and food safety from the anthropological and historical points of view the evolution of food production technologies and the medicinal proscriptive taboo and security aspects of food that continue to prevail in nearly all cultures today She succeeds in demonstrating that no matter how strong the faith in science and economics it is unwise to flagrantly dismiss the deeply rooted beliefs of billions of people a huge majority of the world s population The Beef Hormones case the remaining sovereignty related to food safety measures the increasing significance of appropriate levels of protection and the precautionary principle the redefinition of food hazard to include production processes as well as food itself genetically modified seeds and food products the concept of risk in the science based context of the Codex Alimentarius these are among the issues and topics covered in depth The author concludes that although quick legal resolutions of trade disputes about what people should or should not eat might provide a win for open trade support for the entire structure and rationale of the WTO is undermined unless at the least some flexibility of interpretation is introduced into the WTO Dispute Resolution System in order to recognize the weight and validity of public opinion Food safety is arguably the most important issue affecting international commerce today urgently demanding enlightened discussion and action based on global consensus This well researched and thoughtful contribution offers significant clarification and perspective to policymakers lawyers academics and others engaged in this critical human drama in progress on the world stage The Appraisal of Real Estate American Institute of Real Estate Appraisers, 1962
