- Develop shell programs using command substitution, positional parameters and control structures
- Implementation of SED and AWK
- Develop simple programs using PERL programming

1. a) Develop a Non-recursive shell script that accepts any number of arguments and prints them in the Reverse order. (For example, if the script named rags ,then executing rags A B C should produce C B A on standard output).

b) Write a shell script that accepts two file names as command line arguments, checks if the permissions for these files are identical and output common permissions, otherwise outputs each file name followed by its permissions

2. a) Design a shell script that takes a valid directory name as a command line argument and recursively descends all the sub directories, finds the maximum length of any file in that hierarchy and writes this maximum value to the standard output

b) Develop a shell script which accepts valid login names as command line arguments and prints their corresponding home directories. If no arguments are specified, prints suitable error message.

b) Create an awk program which prints the alternate like 2nd, 4th, 6th, from the file /etc/passwd.

7. a) Write a shell script that finds and displays all the links to a file specified as the first argument to the script. The second argument which is optional can be used to specify the directory in which the search is
