Oceans Environmental Issues Global Perspectives:

Oceans James Fargo Balliett, 2010 Covering 71 percent of the planet oceans provided the unique environmental conditions necessary for the building blocks of life to form billions of years ago and continue to support life in important ways today they are home to nearly 50% of all species on earth they influence climate and weather patterns they provide food and water for humankind Yet they are being threatened by human activity and natural disasters The case studies in *Oceans* include a discussion of the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed underwater the Maldive Islands where rising sea levels may force residents to abandon their communities and the North Sea where fishing stocks have been dangerously depleted as a result of multiple nations unrelenting removal of certain species

Oceans James Fargo Balliett, 2014-12-18 Covering 71 percent of the planet these saline bodies of water provided the unique conditions necessary for the building blocks of life to form billions of years ago This book explains how our oceans continue to support and influence life in important ways by providing the largest global source of protein in the form of fish populations by creating and influencing weather systems and by absorbing waste streams such as airborne carbon It is shown how oceans have an almost magnetic draw almost half of the world's population lives within a few hours of an ocean Although oceans are vast in size exceeding 328 million cubic miles 1 37 billion cubic kilometers they have been influenced by and have influenced humans in numerous ways The book includes three detailed case studies The first focuses on the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed twenty thousand feet underwater The second considers the Maldives a string of islands in the Indian Ocean where increasing sea levels may force residents to abandon some communities by 2020 The third describes the North Sea at the edge of the Arctic Ocean where fishing stocks have been dangerously depleted as a result of multiple nations unrelenting removal of the smallest and largest species

Freshwater James Fargo Balliett, 2014-12-18 Freshwater is our planet's most precious resource and also the least conserved Freshwater makes up only 3 percent of the total water on the planet and yet the majority 1 9 percent is held in a frozen state in glaciers icebergs and polar ice fields This leaves approximately one half of 1 percent of the total volume of water on the planet as freshwater available in liquid form This book traces the complex history of the steady growth of humankind's water consumption which today reaches some 9 7 quadrillion gallons per year Along with a larger population has come the need for more drinking water larger farms requiring extensive irrigation and more freshwater to support business and industry At the same time such developments have led to increased water pollution Three detailed case studies are included The first looks at massive water systems in locations such as New York City and the efforts required to protect and transport such resources The second shows how growth has affected freshwater quality in the ecologically unique and geographically isolated Lake Baikal region of eastern Russia The third examines the success story of the privatized freshwater system in Chile and consider how that country's water sources are threatened by climate change

Governmental Response to Environmental Challenges in Global Perspective Joseph G. Jabbara, O. P. Dwivedi, 1998

In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations

Managing Ocean Environments in a Changing Climate Kevin J. Noone,Ussif Rashid Sumaila,Robert J.

Diaz,2013-06-29 Managing Ocean Environments in a Changing Climate summarizes the current state of several threats to the global oceans What distinguishes this book most from previous works is that this book begins with a holistic global scale focus for the first several chapters and then provides an example of how this approach can be applied on a regional scale for the Pacific region Previous works usually have compiled local studies which are essentially impossible to properly integrate to the global scale The editors have engaged leading scientists in a number of areas such as fisheries and marine ecosystems ocean chemistry marine biogeochemical cycling oceans and climate change and economics to examine the threats to the oceans both individually and collectively provide gross estimates of the economic and societal impacts of these threats and deliver high level recommendations Nominated for a Katerva Award in 2012 in the Economy category State of the science reviews by known marine experts provide a concise readable presentation written at a level for managers and students Links environmental and economic aspects of ocean threats and provides an economic analysis of action versus inaction Provides recommendations for stakeholders to help stimulate the development of policies that would help move toward sustainable use of marine resources and services Global Plastics Outlook Economic Drivers, Environmental Impacts and Policy

Options OECD,2022-02-22 While plastics are extremely useful materials for modern society plastics production and waste generation continue to increase with worsening environmental impacts despite international national and local policy responses as well as industry commitments The first of two reports this Outlook intends to inform and support policy efforts to combat plastic leakage **Sustainable Ocean Governance** Adalberto Vallega,2002-01-31 This topical book examines

ocean governance and calls for close co operation between science and policy Adalberto Vallega uniquely considers the ocean as a spatial complex system which must be represented as a whole and argues that scientific approaches must change to achieve progress and co operation between science and policy *The Role of Ocean-based Negative Emission*
