Classics of Social Choice Iain McLean, Arnold B. Urken, Fiona Hewitt, 1995

Over the centuries an intriguing collection of thinkers have realized that voting and social choice are not straightforward. Yet despite the work of many distinguished contributors in this area the subject has only become established in the last few decades. Indeed many earlier writings were lost and their content forgotten only to be rediscovered later and then forgotten again. This puzzling saga of intellectual history unfolds in *Classics of Social Choice* through these original writings. The editors have included recently discovered pieces and other major contributions newly translated where necessary. The introduction explains who each writer was, locates him in a historical context and analyzes his argument. It was only in the 1940s and 1950s that the theory of social choice was established by Duncan Black and Kenneth Arrow whose Nobel Prize in Economics was awarded in part for this work. It is now a large and thriving branch of economics and politics. *Classics of Social Choice* will interest anyone working in social choice theory as well as students of medieval thought, the Enlightenment and constitutions.

This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series: they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings and historical advances in a hot research area. Find out more on how to host your own Frontiers Research Topic or contribute to one as an author by contacting the Frontiers Editorial Office: frontiersin.org/about/contact.

Bonding, Bridging, and Bypassing Colm A. Fox, 2024

Societal divisions and even violence can occur when electoral candidates appeal to race, religion or tribe. Why do candidates make these ethnic appeals? More specifically, why do some candidates appeal to their own ethnic group while others reach out to other ethnic groups or abandon ethnic appeals altogether? To answer this question, Colm A. Fox adopted a ground-breaking novel approach to study campaign appeals made by thousands of candidates. He collected and systematically analyzed photographs of over 25,000 election posters from campaigns across Indonesia, along with newspaper reports and interview data. The book shows how electoral rules, political party ideology, ethnic demographics and social norms shape candidates' decisions to bond with co-ethnics, bridge across other ethnic groups or bypass ethnicity entirely. Its findings yield not only insights as to which ethnic identities are likely to become politicized but also prescriptions on how to curb divisive ethnic politics.

Logical Modeling of Cellular Processes: From Software Development to Network Dynamics Matteo Barberis, Tomáš Helikar, 2019-08-16

Mathematical models have become invaluable tools for understanding the intricate dynamic behavior of complex biochemical and biological systems. Among computational strategies, logical modeling

has been recently gaining interest as an alternative approach to address network dynamics Due to its advantages including scalability and independence of kinetic parameters the logical modeling framework is becoming increasingly popular to study the dynamics of highly interconnected systems such as cell cycle progression T cell differentiation and gene regulation Novel tools and standards have been developed to increase the interoperability of logical models which can now be employ to respond a variety of biological questions This Research Topic brings together the most recent and cutting edge approaches in the area of logical modeling including among others novel biological applications software development and model analysis techniques *RNA Biology of Microorganisms* Omar Orellana, Orna Amster-Choder, Jiqiang Ling, Rajat Banerjee, 2021-12-31

Proceedings of the Parliament of South Australia South Australia. Parliament, 1894 **The Voynich Manuscript as an Example of Oligo-Agglutinative Pasigraphy, Vol. I: A Fuzzy Set Approach to Decryption** Steve Bolton, Class III problems are considered practically unsolvable in cryptology but none has resisted cryptanalytic attack as persistently as the Voynich Manuscript In the first installment of this 4 volume set we present the linguistic and affix analysis that preceded the first complete but approximate translation of the entire manuscript This contrasts with the piecemeal approach of all prior solutions that resulted in wildly divergent translations of minuscule selections of the text This systemic attack on the entirety of the text and its unusual distributional features such as extreme platykurtia which forbid translation into any natural language resulted first in superior transcription stability and an equally stable symbol set based on intensive statistical analysis The encoding scheme employs a 20 22 letter alphabetic script that most closely resembles a slot and filler top down a priori pasigraphic system with oligo agglutinative features that are currently only considered a theoretical possibility in the linguistics field The intricate affixing system is based mainly on precise placement of single letters to denote case roles semantic classes and 3 primary parts of speech exhibiting a strong noun surfeit At the phrase level we find dominant SOV order and head final dependent marked grammar compatible with heavily formatted inline pharmaceutical lists these result in short ranges of actionable information which no competing solution can claim Plant descriptions are demoted in comparison to other herbals in favor of processing and dispensing details This approximate solution is based on fuzzy set analysis techniques integrated with linguistic universals a wide range of common statistics Pareto and Sukhotin scores Zipf slopes Indexes of Coincidence Agglutination and Synthesis and dozens of others and many home brewed fuzzy algorithms implemented in T SQL and VB Net after the inadequacy of many advanced data mining techniques was demonstrated Our methodology was validated when the project reached an inflection point beyond which we were able to predict the identities and properties of plants based on the text alone The project ended with plausible identification candidates for 121 of 126 herbal section plants and 7 others elsewhere in the manuscript far beyond that of other published solutions An incredible 100% of the 133 identified plants have dermatological uses These can be divided into prominent subtopics like treatment of bites anthelmintics rheumatism and other musculo skeletal ailments inflammatory skin disorders external and possibly

menstrual bleeding excision of blemishes application of cosmetics and cures dispensable in baths The centerpiece of the manuscript is the Rosette Folio which depicts the grand design of a medieval bathhouse keyed to specific astrological timings also defined by satellite diagrams following a precedence hierarchy Each of these uses exhibit telltale polygraph correlations that fall into a handful of semantic hierarchies constructed from highly similar bases such as skin color based diagnostic criteria remedies solutions problems diseases plant parts and the like These findings require 2 volumes to demonstrate and another volume of data and other supplementary material Despite this complexity they culminate in a drastic simplification of the script and the first ever comprehensive translation of the Voynich Manuscript in Volume IV albeit at low resolution

efficiently estimated through a unified mixed model analysis To further validate these new GWAS methods particularly 3VmrMLM they should be rigorously tested in real data of various plants and a wide range of other species *Elementary Education Acts* Great Britain.
