

YES, IT'S GETTING HOTTER

Released in May, 2014, the 840-page U.S. National Climate Assessment report was created by a team of 300 experts, led by a 60-person advisory committee. The report found that evidence of human-induced climate change is strong. Consistent with changes in climate trends, summers are getting hotter and extended periods of excessive heat last longer than in living human memory. Rain is heavier, and allergies are worse than before.
