Intelligent Computational Optimization in Engineering Mario Koeppen, Gerald Schaefer, Ajith Abraham, 2011-07-15 We often come across computational optimization virtually in all branches of engineering and industry. Many engineering problems involve heuristic search and optimization and once discretized may become combinatorial in nature which gives rise to certain difficulties in terms of solution procedure. Some of these problems have enormous search spaces and are NP hard and hence require heuristic solution techniques. Another difficulty is the lack of ability of classical solution techniques to determine appropriate optima of non convex problems. Under these conditions, recent advances in computational optimization techniques have been shown to be advantageous and successful compared to classical approaches. This Volume presents some of the latest developments with a focus on the design of algorithms for computational optimization and their applications in practice. Through the chapters of this book, researchers and practitioners share their experience and newest methodologies with regard to intelligent optimization and provide various case studies of the application of intelligent optimization techniques in real world applications. This book can serve as an excellent reference for researchers and graduate students in computer science, various engineering disciplines and the industry. *Army RD & A.*, 1988 **Army RD & A Bulletin**, 1988 *Electronic Design*, 1986 *Space Microelectronics Volume 2: Integrated Circuit Design for Space Applications* Anatoly Belous, Vitali Saladukha, Siarhei Shvedau, 2017-07-31 This invaluable second volume of a two volume set is filled with details about the integrated circuit design for space applications. Various considerations for the selection and application of electronic components for designing spacecraft are discussed. The basic constructions of submicron transistors and Schottky diodes during the technological process of production are explored. This book provides details on the energy consumption minimization methods for microelectronic devices. Specific topics include features and physical mechanisms of the effect of space radiation on all the main classes of microcircuits including peculiarities of radiation impact on submicron integrated circuits. Special design technology and schematic methods of increasing the resistance to various types of space radiation. Recommendations for choosing research equipment and methods for irradiating various samples. Microcircuit designers on the composition of test elements for the study of the effect of radiation on microprocessors, circuit boards, logic microcircuits, digital analog microcircuits manufactured in various technologies: bipolar, CMOS, BiCMOS, SOI. Problems involved with designing high speed microelectronic devices and systems based on SOS and SOI structures. System on chip and system in package and methods for rejection of silicon microcircuits with hidden defects during mass production. **Energy Efficient and Reliable Embedded Nanoscale SRAM Design** Bhupendra Singh Reniwal, Pooran Singh, Ambika Prasad Shah, Santosh Kumar Vishvakarma, 2023-11-29 This reference text covers a wide spectrum for designing robust embedded memory and peripheral circuitry.
