Schraagen, 2024-04-26 Artificial Intelligence (AI) is widely used in society today. The mis-use of biased data sets in machine learning applications is well known, resulting in discrimination and exclusion of citizens. Another example is the use of non-transparent algorithms that can't explain themselves to users, resulting in the AI not being trusted and therefore not being used when it might be beneficial to use it. *Responsible Use of AI in Military Systems* lays out what is required to develop and use AI in military systems in a responsible manner. Current developments in the emerging field of Responsible AI as applied to military systems in general, not merely weapons systems, are discussed. The book takes a broad and transdisciplinary scope by including contributions from the fields of philosophy, law, human factors, AI systems engineering, and policy development. Divided into five sections: Section I covers various practical models and approaches to implementing military AI responsibly; Section II focuses on liability and accountability of individuals and states; Section III deals with human control in human-AI military teams; Section IV addresses policy aspects such as multilateral security negotiations; and Section V focuses on autonomy and meaningful human control in weapons systems. *Key Features*: Takes a broad transdisciplinary approach to responsible AI; Examines military systems in the broad sense of the word; Focuses on the practical development and use of responsible AI; Presents a coherent set of chapters as all authors spent two days discussing each other's work. This book

provides the reader with a broad overview of all relevant aspects involved with the responsible development deployment and use of AI in military systems It stresses both the advantages of AI as well as the potential downsides of including AI in military systems
