

2-4 TUNING

spark plug to be sure they are all of the same manufacturer and have the same heat range rating.

Inspect the threads in the spark plug opening of the block, and clean the threads before installing the plug.

When purchasing new spark plugs, **ALWAYS** ask the marine dealer if there has been a spark plug change for the engine being serviced.

Crank the engine through several revolutions to blow out any material which might have become dislodged during cleaning.

Install the spark plugs and tighten them to a torque value of 17 ft-lbs (23 Nm). **ALWAYS** use a new gasket and wipe the seats in the block clean. The gasket must be fully compressed on clean seats to complete the heat transfer process and to provide a gas tight seal in the cylinder. If the torque value is too high, the heat will dissipate too rapidly. Conversely, if the torque value is too low, heat will not dissipate fast enough.

2-5 IGNITION SYSTEM

Four, yes, four different ignition systems are used on the outboard engines covered in this manual. If the engine performance is less than expected, and the ignition is diagnosed as the problem area, refer to Chapter 6 for detailed service procedures. The various types are clearly identified and cross-referenced in the Appendix. Once the Type system for the engine being serviced is known, the work can proceed smoothly. To properly time and synchronize the ignition system with the fuel system, see Chapter 5.

A fouled spark plug. The condition of this plug indicates problems in the cylinder which should be corrected.

Breaker Points

SOME GOOD WORDS: High primary voltage in Thunderbolt ignition systems (referred to as Type I and Type II in the Appendix), will darken and roughen the breaker points within a short period. This is not cause for alarm. Normally points in this condition would not operate satisfactorily in the conventional magneto, but they will give good service in the Thunderbolt systems. Therefore, **DO NOT** replace the points in a Type I or Type II Thunderbolt system unless an obvious malfunction exists, or the contacts are loose or burned. Rough or discolored contact surfaces are **NOT** sufficient reason for replacement. The cam follower will usually have worn away by the time the points have become unsatisfactory for efficient service.

Check the resistance across the contacts. If the test indicates zero resistance, the points are serviceable. A slight resistance across the points will affect little operation. A high resistance may cause the ignition system to malfunction and loss of spark. Therefore, if any resistance across the points is indicated, the point set should be replaced.

2-6 TIMING AND SYNCHRONIZING

Correct timing and synchronization are essential to efficient engine operation. An engine may be in apparent excellent mechanical condition, but perform poorly, un-

Worn ignition points are a common problem area with units having a distributor with points.
