

# IGNITION SYSTEM

## GENERAL

The vehicle uses a breakerless inductive-discharge ignition system. The system has both a primary and secondary circuit. The primary circuit consists of the battery, ignition switch, primary coil winding, computerized ignition timer and associated wiring. The secondary circuit consists of the secondary coil, spark plugs and associated wiring. See Figure 7-1.

The computerized ignition system contains three assemblies.

## Ignition Module

The ignition module is mounted to the vehicle frame under a protective cover; it is located to the right of the battery. The ignition module has two functions. First, it computes the spark advance for proper ignition timing. Second, it opens and closes the low-voltage circuits between the battery and ignition coil to produce high-voltage discharge to the spark plugs.

Figure 7-1. Ignition System Components

# Repair Manual For A Differential 1997 S1
