

## **CPC Exam A With Questions and Answers**

46 year-old female had a previous biopsy that indicated positive malignant margins anteriorly on the right side of her neck. A 0.5 cm margin was drawn out and a 15 blade scalpel was used for full excision of an 8 cm lesion. Layered closure was performed after the removal. The specimen was sent for permanent histopathologic examination. What are the CPT® code(s) for this procedure?

- A. 11626
- B. 11626, 12004-51
- C. 11626, 12044-51
- D. 11626, 13132-51, 13133 - ANSWER C. 11626,12044-51

According to CPT® guidelines "Repair of an excision of a malignant lesion requiring intermediate or complex closure should be reported separately". The intermediate repair code is reported because it was a layered closure.

30 year-old female is having 15 sq cm debridement performed on an infected ulcer with eschar on the right foot. Using sharp dissection, the ulcer was debrided all the way to down to the bone of the foot. The bone had to be minimally trimmed because of a sharp point at the end of the metatarsal. After debriding the area, there was minimal bleeding because of very poor circulation of the foot. It seems that the toes next to the ulcer may have some involvement and cultures were taken. The area was dressed with sterile saline and dressings and then wrapped. What CPT® code should be reported?

- A. 11043
- B. 11012
- C. 11044
- D. 11042 - ANSWER C. 11044

Debridement is not being performed on an open fracture/open dislocation eliminating multiple choice answer B. The ulcer was debrided all the way to the bone of the foot, making multiple choice answer C, the correct procedure.

64 year-old female who has multiple sclerosis fell from her walker and landed on a glass table. She lacerated her forehead, cheek and chin and the total length of these lacerations was 6 cm. Her right arm and left leg had deep cuts measuring 5 cm on each extremity. Her right hand and right foot had a total of 3 cm lacerations. The ED physician
