partners was chosen as the theme. Many of the personalized accounts of the farmers presented in the Report convey the role of farmers as co-researchers rather than only as recipients of research outcomes. Rice farmers in the developing world traditionally conduct experiments with their rice crops. Their experiments and the evaluation of the outcomes have had to be as relevant and creative as any trials carried out by scientists as the economic and even physical survival of the farmers and their families has been totally dependent on such activities. This year's Report features some of the work that IRRI scientists and all those who support them continue to do in collaboration with numerous partners in the developing and developed world.

Parabolic Geometries I Andreas Čap, Jan Slovák, 2024-07-29 Parabolic geometries encompass a very diverse class of geometric structures including such important examples as conformal projective and almost quaternionic structures hypersurface type CR structures and various types of generic distributions The characteristic feature of parabolic geometries is an equivalent description by a Cartan geometry modeled on a generalized flag manifold the quotient of a semisimple Lie group by a parabolic subgroup Background on differential geometry with a view towards Cartan connections and on semisimple Lie algebras and their representations which play a crucial role in the theory is collected in two introductory chapters The main part discusses the equivalence between Cartan connections and underlying structures including a complete proof of Kostant s version of the Bott Borel Weil theorem which is used as an important tool For many examples the complete description of the geometry and its basic invariants is worked out in detail The constructions of correspondence spaces and twistor spaces and analogs of the Fefferman construction are presented both in general and in several examples The last chapter studies Weyl structures which provide classes of distinguished connections as well as an equivalent description of the Cartan connection in terms of data associated to the underlying geometry Several applications are discussed throughout the text

An Indonesian-English Dictionary John M. Echols, Hassan Shadily, John U. Wolff, 1989 This dictionary is meant primarily as a tool for English speakers who need to know Indonesian and who deal with Indonesian writings The aim has thus been to give comprehensive coverage to forms a foreigner might run across in Indonesian readings from this era or from the past but excluding classical Malay literature Much of the Indonesian written production written and otherwise contains slangy colloquial and regional forms and we have not excluded such forms On the other hand we have confined the listing of dialectal forms only to those likely to be widely known The dictionary should also be useful to Indonesians who wish to learn English equivalents of Indonesian words but it has not been developed primarily for that purpose because many English words can only be defined by a sequence of Indonesian words from Introduction
