Amoeba Sisters Video Recap of Meiosis: The Great Divide

1. The purpose of meiosis is to make gametes, also known as sperm and egg cells. In humans, your body cells have 46 chromosomes. How many chromosomes are in a sperm or egg cell if, when they come together to form a fertilized zygote, there are 46 chromosomes? Write the correct number of chromosomes next to the sperm and egg.

2. Interphase must occur once before meiosis can happen. (Same thing for mitosis). What would happen if interphase didn't occur first?

Meiosis wouldn't happen because there is nothing to divide.

3. Remember that a cell that begins meiosis has 23 chromosomes inherited from mother (one is shown in red on the right in cartoon) and 23 chromosomes inherited from father (one is shown in blue on the left in cartoon). In the process of meiosis, chromosomes begin to match up in homologous pairs. How would you know if two chromosomes were homologous?

Same size & same shape of genes. They match up.

4. Crossing over is a very important event in Prophase I of meiosis! What happens during crossing over and what is the significance?

Chromosomes transfer genetic information.

Significance: contribute to gene differences in siblings

5. Meiosis does PMAT twice! That means there is a prophase 1 and a prophase 2. There is a metaphase 1 and a metaphase 2. Etc... If the cartoon below has chromosomes in the middle of the cell, how would you know whether it was in metaphase 1 or metaphase 2?

Metaphase 1 because there's not in a single line

6. Meiosis does not always occur without any difficulties. Describe what occurs during nondisjunction and the effect on the resulting cells.

Cell receives too much or too little genetic info. Leads to genetic disorders
