Schaler, 2011-09-30 Politicians and the media tell us that people who take drugs including alcohol or nicotine cannot help themselves They are supposedly victims of the disease of addiction and they need treatment The same goes for sex addicts shopping addicts food addicts gambling addicts or even addicts to abusive relationships This theory which grew out of the Temperance movement and was developed and disseminated by the religious cult known as Alcoholics Anonymous has not been confirmed by any factual research Numerous scientific studies show that addicts are in control of their behavior Contrary to the shrill mindless propaganda of the war on drugs very few of the people who use alcohol marijuana heroin or cocaine will ever become addicted and of those who do become heavy drug users most will matruue out of it in time without treatment Research indicates that treatment is completely ineffective an absolute waste

of time and money Instead of looking at drug addiction as a disease Dr Schaler proposes that we view it as willful commitment or dedication akin to joining a religion or pursuing a romantic involvement While heavy consumption of drugs is often foolish and self destructive it is a matter of personal choice *Addiction* Jon Elster,1999-10-28 *Addiction* focuses on the emergence nature and persistence of addictive behavior as well as the efforts of addicts to overcome their condition Do addicts act of their own free will or are they driven by forces beyond their control Do structured treatment programs offer more hope for recovery What causes relapses to occur Recent scholarship has focused attention on the voluntary aspects of addiction particularly the role played by choice *Addiction* draws upon this new research and the investigations of economists psychiatrists philosophers neuropharmacologists historians and sociologists to offer an important new approach to our understanding of addictive behavior The notion that addicts favor present rewards over future gains or penalties echoes throughout the chapters in *Addiction* The effect of cultural values and beliefs on addicts and on those who treat them is also explored particularly in chapters by Elster on alcoholism and by Aker on American heroin addicts in the 1920s and 1930s Essays by Gardner and by Waal and M rland discuss the neurobiological roots of addiction Among their findings are evidence that addictive drugs also have an important effect on areas of the central nervous system unrelated to euphoria or dysphoria and that tolerance and withdrawal phenomena vary greatly from drug to drug The plight of addicts struggling to regain control of their lives receives important consideration in *Addiction* Elster Skog and O Donoghue and Rabin look at self administered therapies ranging from behavioral modifications to cognitive techniques and discuss conditions under which various treatment strategies work Drug based forms of treatment are discussed by Gardner drawing on work that suggests that parts of the population have low levels of dopamine inducing a tendency toward sensation seeking There are many different explanations for the impulsive self destructive behavior that is addiction By bringing the triple perspective of neurobiology choice and culture to bear on the phenomenon *Addiction* offers a unique and valuable source of information and debate on a problem of world wide proportions *Dynamic Economic Problems with Regime Switches* Josef L.
