# Drug Education Guide

Effects of drugs depend upon dose  
and drug abuse form. Drug abuse  
can lead to substance dependence,  
accidents, violence, hallucinations,  
and death. Long-term drug abuse  
causes damage to the brain, liver,  
and other organs.

Most drugs come in four main groups:

## HALLUCINOGENS

These drugs are known for distorting vision and  
other senses, feelings, and they also can cause paranoia  
and anxiety.

## DEPRESSANTS

These drugs are used to feel relaxed and  
reduce anxiety. When abused, depressants can lead to  
respiratory problems, slowed heart rate, and death.

## STIMULANTS

These drugs are known to increase alertness and  
energy. When abused, stimulants can lead to  
heart problems, high blood pressure, and death.

## OPIODS

These drugs are used to relieve pain and  
reduce anxiety. When abused, opioids can lead to  
respiratory problems, slowed heart rate, and death.

These drugs may also have both pain and mood effects. For example, alcohol and tobacco  
are known to have both depressant and stimulant effects.

**A Thematic Guide to Documents on Health and Human Rights** Gudmundur Alfredsson, Katarina Tomaševski, 2023-09-20 This publication is the second volume of Thematic Human Rights Guides published under the auspices of the Raoul Wallenberg Institute of Human Rights and Humanitarian Law The aim of the Guides as the title implies is to facilitate the use of international human rights standards by their systematic presentation Rather than reproducing full texts of various instruments substantive standards are grouped according to subject matter in order to enable users to quickly and easily locate the topic they may be looking for A detailed index with references to the many international

instruments which address the same issue reinforces this thematic approach The choice of human rights and health for the second volume in this series highlights the aim of the Guides to map out the entire range of human rights and fundamental freedoms as they relate to a specific topic The sheer size of this volume illustrates the number and variety of human rights standards relevant for health Many of these standards have been generated by organizations dealing with health rather than human rights and quite a few are found under medical ethics rather than human rights Subsuming medical ethics under international human rights law is a novel development pioneered by the Council of Europe Elsewhere the two fields remain separate and the publication of this Guide is intended to overcome this separation Documents have been included which provide an understanding of human rights within the health profession such as guidance to medical doctors with regard to abortion adopted by the International Medical Association and those human rights safeguards that have been elaborated to prevent abuses by health professionals such as those concerning mental health All of these standards provide a substantive background for inter professional dialogue on the evolving understanding of human rights A Thematic Guide to Documents on Health and Human Rights reflects the full range of issues encompassed by human rights and health Besides the right to health a wide range of rights and freedoms can be and is affected by the health sector Priority has been accorded to the crucial human rights safeguards namely those specifying protection against undue limitations or restrictions upon human rights Much as with any other human rights topic those safeguards are best developed for categories that are most vulnerable to denials and violations of their rights Detainees prisoners victims of armed conflicts children and the mentally ill thus figure prominently
