TEK 6.8A: Potential & Kinetic Energy

TEK 6.8A: Compare and contrast potential and kinetic energy.

- Energy is the ability to do work or cause change. Unlike matter, energy does not have mass or take up space. It is visible only through the motion of matter or other changes to matter that it causes.
- Energy is found in six different forms: mechanical energy, chemical energy, thermal energy, electrical energy, radiant (or electromagnetic) energy, and nuclear energy:
 - Mechanical energy is the energy of motion of large objects (masses of particles moving in unison), or the energy stored in large objects because of their position or condition, such as compression or tension. A moving car, ocean wave, compressed spring, stretched rubber band and sound are all examples of mechanical energy.
 - Chemical energy is the energy stored in the bonds between atoms, such as ionic or covalent bonds. The food we eat has chemical energy stored in it, which is transformed into thermal or mechanical energy by our body's digestive process.
 - Thermal energy is the energy of vibrational motion in atoms and molecules. The greater the rate of vibration, the greater the thermal energy, measured as temperature, the particles have. Any atom or molecule above absolute zero (-273°C) has thermal energy.
 - Electrical energy is the energy found in charged particles. If the charges are not moving, we call it static electricity. If the particles (usually electrons) are moving, it is an electrical current.
 - Radiant or electromagnetic energy is the only form of energy that does not need matter to be transmitted. Radio waves and light are types of radiant energy.
 - Nuclear energy is the energy stored in the nucleus of atoms.
- All of the above energy forms can be classified into two broad categories: kinetic and potential energy. Some energy forms can be either kinetic or potential, depending on their motion, while others by their nature can only be in one category.
- **Kinetic energy** is the energy of motion.
 - When the motion is in a larger object, we say that the motion is evidence of **mechanical kinetic energy**. A moving car has kinetic energy. Waves (a rhythmic disturbance that transmits energy) moving through air (sound), rocks
