

STAGE 2 MATHEMATICAL APPLICATIONS

FOLIO - INVESTIGATION 1

Purpose

To demonstrate your ability to:

- use a range of mathematical skills from the topic of Matrices to investigate a problem set in a context
- apply your knowledge, skills, and problem-solving strategies to develop a model from which you can make predictions.

Description of assessment

Use your knowledge of transition matrices to investigate the level of support that the fast-food outlets in your regional city could expect to have in the future. Using a justified sampling method and a survey of your design, collect information on the fast food habits of a sample of residents from the local area. Make predictions using transition matrix methods about how many of your sample will purchase their next fast food meal at each of the fast food outlets being investigated. Discuss the long term prospects for each of the fast food outlets in the regional city, including a discussion of the reliability of your answers and any assumptions that have been made. Discuss the limitations of extrapolating the model that you have created to make predictions about the population of your regional city. All solutions are to be supported with calculations and appropriate representation and notation.

Assessment conditions

You have three weeks to complete this assessment task. Use of technology is required. Your investigation should include:

- (a) an introduction that demonstrates your understanding of the problem to be explored
- (b) evidence of the developed solution and the solution reached
- (c) analysis and interpretation of the results
- (d) a conclusion
- (e) acknowledgements, appendixes, and bibliography (as required).
