## Industrial Revolution

How the Industrial Revolution led to the Civil War

The Industrial Revolution brought about many significant changes all across the United States. This was the first time major inventions in the United States occurred in such a quick time frame. Some of these inventions were the steam engine, cotton gin, and telegram. Some of these changes would also begin to divide the United States. This would eventually lead to the Civil War.

The **cotton gin** forever changed cotton growth and harvesting in the South. The cotton gin allowed farms to produce much more cotton than in the past, and it was cheaper. The demand for cotton was extremely high around the world. The South grew record numbers, and the North used the cotton in factories to make more goods. The cotton gin also increased slavery in the South. The gin separated the cotton seeds from fibers, which made cleaning cotton easier and quicker. Therefore, more cotton could be grown. Slavery would be increased drastically to grow more cotton. The South had massive cotton plantations with more enslaved people than ever before. This growth in slavery would create **tension** between the North and South. It was one of the causes of the Civil War.

Another cause of the Civil War was **cultural** differences between the North and South. The South had a plantation way of life that was based on agriculture and cotton. The South felt threatened that their way of life could end. Many in the North believed that slavery was wrong. The North was also beginning to shift to cities and **industry** at this time. This created a divide between the North and South on ways of life and culture. The South wanted to keep an agricultural way of life. The North wanted to grow industry. The **Industrial Revolution** strengthened both sides' opinions.

The cotton gin was an invention that brought major change to the South.
