*Biology of Sharks and Their Relatives, Second Edition* Jeffrey C. Carrier, John A. Musick, Michael R. Heithaus, 2012-04-09 Virtually every area of research associated with sharks and their relatives has been strongly impacted by the revolutionary growth in technology The questions we can now ask are very different than those reported even two decades ago Modern immunological and genetic techniques satellite telemetry and archival tagging modern phylogenetic analysis GIS and bomb dating are just a few of the techniques and procedures that have become a part of our investigative lexicon A modern synthesis of the biology of Chondrichthyans *Biology of Sharks and Their Relatives Second Edition* discusses significant advances in the development and application of new molecular techniques to the understanding of the phylogenetic relationships among and between these groups The book considers the effect of global changes on the status of sharks and their relatives and how advances in

technology and analytical techniques have changed not only how we approach problem solving and scientific investigations but how we formulate questions The book also introduces applications of new and novel laboratory devices techniques and field instruments This second edition of the award winning and groundbreaking original exploration of the fundamental elements of the taxonomy systematics physiology and ecology of sharks skates rays and chimera presents cohesive and integrated coverage of key topics and discusses technological advances used in modern shark research Offering a well rounded picture for students and researchers and far above competitors in scope and research this new volume holds a wealth of data on the current status of Chondrichthyan research and provides the basis and springboard for original research

Ebert, Sarah Fowler, 2021-07-20 Fully revised and updated Back cover      **A Bibliography of Sharks and Related Species**, 1987      **The Shark Handbook** Greg Skomal, 2008-07 Discusses the sharks of the world what they are how they evolved and how they thrive in their marine environment Describes shark anatomy and adaptation shark conservation shark attacks and over 450 species      [A Probabilistic Characterization of Shark Movement Using Location Tracking Data](#) Samuel Ackerman, 2018 Our data consist of measurements of 22 sharks movements within a 366 acre tidal basin The measurements are made at irregular time points over a 16 month interval Constant length observation intervals would have been desirable but are often infeasible in practice We model the sharks paths at short constant length intervals by inferring their behavior feeding vs transiting interpolating their locations and estimating parameters of motion speed and turning angle in environmental and ecological contexts We are interested in inferring regional differences in the sharks behavior and behavioral interaction between them Our method uses particle filters a computational Bayesian technique designed to sequentially model a dynamic system We discuss how resampling is used to approximate arbitrary densities and illustrate its use in a simple example of a particle filter implementation of a state space model We then introduce a particular model formulation that uses conditioning to introduce unobserved parameters for the shark s behaviors We show how the irregularly observed shark locations can be modeled by interpolation as a set of movements at constant length time intervals We use a spline method for generating approximations of the ground truth at these intervals for comparison with our model Finally we demonstrate our model s estimates of the sharks behavioral and ecological parameters of interest on a subset of the observed data      **Immunobiology of the Shark** Sylvia L. Smith, Robert

B. Sim, Martin F. Flajnik, 2014-12-04 Immunity studies in sharks over the past three decades have produced some remarkable discoveries. If one message rings true, it is that alternative animal model systems such as sharks and their relatives have contributed very substantially to a better understanding of the development and evolution of our own immune system. *Immunobiology of the Shark* describes the cellular, genetic, and molecular specifics of immune systems in sharks. Diverse approaches were employed to study the immunobiology of the shark, from basic microscopic observations to detailed genome annotation. The book also raises a series of fascinating questions which can be addressed experimentally using today's technology. This book will be a valuable resource for mainstream immunologists, comparative immunologists, geneticists, ecologists, evolutionary biologists, and investigators engaged in shark research. The book also aims to illustrate the magnificence of these animals as model systems and underscores the importance of their study to further understand their complex and often enigmatic biology.
