

Chapter 15 Study Guide

Although Study Guides are helpful for obtaining an overview of the chapter, we need to read the chapter VERY carefully and take detailed notes (especially regarding numbers/statistics; overall findings/trends) and then study those notes. The computer randomly selects test questions from the chapter with some questions being definitions (maybe easier) and some being application of concepts (maybe more difficult). The majority of your time should be reading the text, taking notes on the text, and studying those notes. After completing this process, answering the Study Guide questions should be a nice review of what you have learned.

Chapter 15 describes the cognitive advances and limitations of adolescence. With the attainment of formal operational thought, the developing person becomes able to think in an adult way—that is, to be logical, to think in terms of possibilities, and to reason both scientifically and abstractly.

Even those who reach the stage of formal operational thought spend much of their time thinking at less-advanced levels. The discussion of adolescent egocentrism supports this generalization in showing that adolescents have difficulty thinking rationally about themselves and their immediate experiences. Adolescent egocentrism makes adolescents see themselves as psychologically unique and more socially significant than they really are.

The next section examines the use of technology, exploring the advantages and disadvantages to adolescents in contemporary society. As adolescents enter middle school, their grades often suffer and behavioral problems increase. Larger schools and student populations deteriorate teacher and peer bonds. In most high schools, rigid behavioral demands and intensified competition do not, unfortunately, provide a supportive learning environment for adolescents.

After reading this chapter, you should be able to:

- Define adolescent egocentrism and identify common types of egocentric thoughts.
- Explain the characteristics of formal operational thought.
- Describe the differences between deductive and inductive reasoning.
- Analyze the benefits and drawbacks to intuitive and analytic thought.
- List the advantages and disadvantages of high-stakes testing.

Logic and Self

- 1) How does adolescent egocentrism differ from early childhood egocentrism? The text talks about how egocentrism leads to imaginary audience, personal fable, and invincibility fable. What do these mean?
- 2) Describe Piaget's fourth and final stage of cognitive development, formal operational thought. What is Piaget's balance-scale test of formal reasoning? At what age can a child/adolescent systematically test this experiment (as opposed to using trial and error)?
- 3) What is deductive reasoning and inductive reasoning? Provide examples of each.
- 4) Be familiar with the dual processing model.
