Gudjonsson, 2018-07-23 Provides a comprehensive and up to date review of the development of the science behind the psychology of false confessions Four decades ago little was known or understood about false confessions and the reasons behind them So much has changed since then due in part to the diligent work done by Gisli H Gudjonsson This eye opening book by the Icelandic British clinical forensic psychologist who in the mid 1970s had worked as detective in Reykjavik offers a complete and current analysis of how the study of the psychology of false confessions came about including the relevant theories and empirical experimental evidence base It also provides a reflective review of the gradual development of the science and how it can be applied to real life cases Based on Gudjonsson s personal account of the biggest murder investigations in Iceland s history as well as other landmark cases *The Psychology of False Confessions Forty Years of Science and Practice* takes readers inside the minds of those who sit on both sides of the interrogation table to examine why confessions to crimes occur even when the confessor is innocent Presented in three parts the book covers how the science of studying false confessions emerged and grew to become a regular field of practice It then goes deep into the investigation of the mid 1970s assumed murders of two men in Iceland and the people held responsible for them It finishes with an in depth psychological analysis of the confessions of the six people convicted Written by an expert extensively involved in the development of the science and its application to real life cases Covers the most sensational murder cases in Iceland s history Deep analysis of the Reykjavik Confessions adds crucial evidence to understanding how and why coerced internalized false confessions occur and their detrimental and lasting effects on memory *The Psychology of False Confessions Forty Years of Science and Practice* is an important source book for students academics criminologists and clinical forensic and social psychologists and psychiatrists *Number without language: comparative psychology and the evolution of numerical cognition* Christian Agrillo, Michael Beran, 2013-07-09

Despite once being reserved as perhaps a unique human ability and one reliant on language comparative and developmental research has shown that numerical abilities predate verbal language Human infants and several non human species have been shown to represent numerical information in varied contexts and the capacity to discriminate both small and large numerosities has been reported in mammals birds amphibians and fish The similar performances often observed across such diverse species have led to the hypothesis that there may be shared core systems underlying number abilities of non human species and human non verbal numerical abilities Thus animal models could provide useful insight on our comprehension of numerical cognition and in particular the evolution of non verbal numerical abilities Several aspects need be clarified For instance the ontogeny of numerical competence in animals has been

rarely investigated It is unclear whether all species can represent numerical information or on the contrary use non numerical continuous quantities that co vary with number such as cumulative surface area density and space In addition the existence of a specific mechanism to process small numbers      **The Oxford Handbook of Molecular Psychology** Turhan Canli,2015-02-18 Determining the biological bases for behavior and the extent to which we can observe and explain their neural underpinnings requires a bold broadly defined research methodology The interdisciplinary entries in this handbook are organized around the principle of molecular psychology which unites cutting edge research from such wide ranging disciplines as clinical neuroscience and genetics psychology behavioral neuroscience and neuroethology For the first time in a single volume leaders in diverse research areas use molecular approaches to investigate social behavior psychopathology emotion cognition and stress in healthy volunteers patient populations and an array of non human species including rodents insects fish and non human primates Chapters draw on molecular methods covering candidate genes genome wide association studies copy number variations gene expression studies and epigenetics while addressing the ethical legal and social issues to emerge from this new and exciting research approach      **Adjusting National Health and Nutrition Examination Survey Sample Weights for Women of Childbearing Age** ,2013
