Academic and practitioner journals in fields from electronics to business to language studies as well as the popular press have for over a decade been proclaiming the arrival of the computer revolution and making far reaching claims about the impact of computers on modern western culture Implicit in many arguments about the revolutionary power of computers is the assumption that communication language and words are intimately tied to culture that the computer's transformation of communication means a transformation a revolutionizing of culture Moving from a vague sense that writing is profoundly different with different material and technological tools to an understanding of how such tools can and will change writing writers written forms and writing's functions is not a simple matter Further the question of whether and how changes in individual writers experiences with new technologies translate into large scale cultural revolutions remains unresolved This book is about the relationship of writing to its technologies It uses history theory and empirical research to argue that the effects of computer technologies on literacy are complex always incomplete and far from unitary despite a great deal of popular and even scholarly discourse about the inevitability of the computer revolution The author argues that just as computers impact on discourse discourse itself impacts technology and explains how technology is used in educational settings and beyond

Teaching for Student Learning

Dick Arends, Ann Kilcher, 2010-02-25 Teaching for Student Learning Becoming an Accomplished Teacher shows teachers how to move from novice to expert status by integrating both research and the wisdom of practice into their teaching It emphasizes how accomplished teachers gradually acquire and apply a broad repertoire of evidence based teaching practices in the support of student learning The book's content stems from three major fields of study 1 theories and research on how people learn including new insights from the cognitive and neurosciences 2 research on classroom practices shown to have the greatest effect on student learning and 3 research on effective schooling defined as school level factors that enhance student achievement and success Although the book's major focus is on teaching it devotes considerable space to describing how students learn and how the most effective and widely used models of teaching connect to principles of student learning Specifically it describes how research on teaching cognition and neuroscience converge to provide an evidence based science of learning which teachers can use to advance their practice Key features include the following Evidence Based Practice This theme is developed through 1 an ongoing review and synthesis of research on teaching and learning and the resulting guidelines for practice and 2 boxed research summaries within the chapters Instructional Repertoire Theme Throughout the book teaching is viewed as an extremely complex activity that requires a repertoire of instructional strategies that once mastered can be drawn upon to fit specific classrooms and teaching situations Standards based School Environments Education today is dominated by standards based school environments Unlike competing books this one describes these environments and shows how they impact curriculum design and learning activities The objective is to show how teachers can make standards based education work for them

Pedagogical Features In addition to an end of book glossary each chapter contains research boxes reflection boxes itemized end of chapter summaries and end of chapter learning activities Website An accompanying website contains a variety of field oriented and site based activities that teachers can do alone or with colleagues

eLearning for Quality Teaching in Higher Education Nan Yang,2020-04-20 This book explores the impact of eLearning on the quality of teaching in higher education focusing on three main issues university teachers perception of quality teaching their strategies for achieving quality teaching in practice and interventions that design and implement online collaborative activities in a large class The book argues that if eLearning targets the real problems in practice and is appropriately designed and implemented it can improve the teaching quality at universities It also demonstrates the complexity of teachers perception of quality teaching and contextual factors that affect teaching practice and quality Further it explores university teachers perception of quality teaching in Italy the UK and China an aspect that is rarely addressed in the literature and reveals why the impact of ICTs on university teaching is not as great as in other fields by explaining the issues that threaten the quality of day to day teaching Lastly it confirms that traditional lecturing combined with online collaborative activities improves the quality of teaching compared to traditional lecturing alone As such this book is a necessary and important resource for the research community
