Ye, Chaoshu Zeng, Naoaki Tsutsui, Heinrich Dirksen, 2022-09-27 Demand for crustacean production is increasing significantly throughout the world and crustacean production from capture fisheries has almost stagnated Aquaculture is the only possibility to meet this ever growing demand for crustaceans Still many commercially important crustaceans are being captured from the wild while breeding and seed production technologies are not available for these species The bottleneck in the successful breeding of crustacean species is mainly due to the non availability of information about reproductive biology Studies on crustacean reproduction will shed new light on understanding the mechanism of sex determination and differentiation meanwhile the application of innovative techniques will vitally contribute to the progress of the crustacean industry The research findings on crustacean reproduction will directly benefit aquaculture for successful captive breeding and seed production Here we are gathering both original research and review papers with the scope of the research topic including but not limited to Mechanism of sex determination sexual differentiation and gonadal development in crustaceans Other life functions e g endocrine nutrition immunity heredity involved in reproduction in crustaceans Applications of modern endocrinological and molecular approaches contributed to crustacean reproduction **Immune pathogenesis of**

The explosive accumulation of new knowledge in the biological sciences in the last decades has advanced our understanding of the basic mechanisms that underlie most biological phenomena These advances however have not been uniform but have varied considerably among the different biological problems In some cases e g biochemical genetics radical advances have been made which have changed our ideas and our approaches In other cases even with work which has yielded much detailed new knowledge our understanding of basic mechanisms remains very inadequate Among the lines of work that have not yet led to dramatic conceptual advances is the problem of control of biological activities This problem is of course basic both to any full understanding of life as a whole and to any real understanding of its most minute phenomena Indeed the myriad of biological activities that we can observe by direct or indirect means are all under the sway of most exquisitely

precise mechanisms Any malfunctioning of these mechanisms has serious consequences not only for the particular function itself but for all the related and interlinked activities

Opportunistic pathogens: pathogenesis and multi-drug resistance mechanisms Shicheng Chen,Lisheng Liao,Mingxi Wang,2025-04-17 The World Health Organization WHO has identified antimicrobial resistance AMR as one of the most critical global public health threats At least 4 95 million people death was caused by AMR in 2019 Even worse its potential economic impact is estimated to reach a staggering 100 trillion due to AMR in the next thirty years <https://www.who.int/health-topics/antimicrobial-resistance> Researching the development of antibiotic resistance and exploring ways to prevent detect and treat antimicrobial resistant infections have been prioritized in the medical microbiology field AMR mechanisms have been uncovered on many Enterobacteriaceae and Gram positive bacteria such as Enterococcus faecium and Staphylococcus aureus due to their clinical significance and diverse resistance mechanisms Unfortunately the opportunistic pathogens have been overlooked in the clinics because they are often identified as normal flora or common environmental organisms in human specimens Opportunistic pathogens may have low pathogenicity while they can often cause serious infections in immunocompromised patients and lead to outbreak in the healthcare settings They may even lead to diseases in healthy individuals if being introduced into hosts system by traumatization Management of such infections is often challenging due to the lack of guidelines standards for antibiotic susceptibility tests as well as multi drug resistance MDR Lately diseases linked to non pathogenic microorganisms are becoming more common under typical conditions such as Stenotrophomonas maltophilia Elizabethkingia spp Acinetobacter baumannii and many others

Advanced Therapy of Inflammatory Bowel Disease Theodore M. Bayless,Stephen B. Hanauer,2011 Now published in two volumes to accommodate new chapters on the many advances in understanding and treatment options this set of volumes represents the definitive reference on inflammatory bowel disease a spectrum of diseases that is receiving increasing attention as our understanding of the etiological factors increases and diagnostic tools are refined Basic research accelerated at the beginning of this decade and is now yielding new more targeted treatments than were available just a few years ago Volume 1 is on IBD and Ulcerative Colitis and Volume 2 is on IBD and Crohn s Disease All areas that were covered in the 2nd edition have been expanded and updated New sections include the rapidly expanding knowledge of genetics and the role of the intestinal flora and environmental factors in etiology and pathogenesis Among the 168 chapters there are 20 on biologic therapies and 30 on surgical management The consultant authors clearly state their approach to important issues such as the duration of immunomodulator and of anti TNF use and the options for managing isolated low grade dysplasia A strong focus on the

individual patient is woven throughout both volumes including the benefits and risks of potentially life altering therapies and surgeries Entire sections detail concerns about the well being of each person This book provides information for health professionals who help both pediatric and adult patients navigate through the lifelong shadow of a chronic probably genetically determined ordeal

Therapeutic potential of natural products in oxidative and metabolic diseases Ochuko Lucky Erukainure, Aliyu Muhammad, Erukainure, Aliyu Muhammad, Chika Ifeanyi Chukwuma, Md Shahidul Islam, Olakunle Sanni, Veronica Folakemi Salau, 2024-04-26 Oxidative and metabolic diseases represent a large proportion of global challenges to health and quality of life These diseases are often characterised by the imbalance between the cellular prooxidant products of metabolic processes and the antioxidant molecules within the cells The imbalance often led to the underlying factors that exacerbate the pathogenesis of some life threatening diseases such as carcinogenesis obesity diabetes and cardiovascular diseases Natural products including phytochemicals and functional foods are known for their ability to affect metabolic processes such as ameliorating reactive oxygen species induced mitochondria dysfunction mitigating inflammatory response and other cellular functions that could ameliorate the disease developments Despite the relatively low toxicities of natural products as compared with synthetic products further studies are still required to optimize the bioavailability therapeutics pharmaceuticals and clinical trials of natural products in patients suffering oxidative and metabolic diseases

Recent Advances in Understanding The Genetics of Immunological Disorders Che Kang Lim, Jinqiao Sun, Hassan Abolhassani, 2024-12-13 Immunological disorders are diseases or conditions due to the dysfunction of the immune system They include primary immunodeficiency syndromes autoimmune diseases asthma allergy and autoinflammatory syndromes These disorders disrupt our body's ability to defend against pathogens In addition it may lead to exaggerated chronic inflammatory responses and tissue damage Immunological disorders are clinically and genetically heterogeneous The phenotypic spectrum of the diseases is broad in some of the disorders On the other hand the clinical phenotype derived from distinct genotypes can overlap and the same phenotype can be cross shared in different disorders Therefore accurate diagnosis and effective management are challenging Over the last decade advances in genomics and sequencing platforms have accelerated the understanding of how candidate genes contribute to the development of immunological disorders Significant progress has been made in discovering disease causing genes for rare monogenic immunological disorders especially in immunodeficiency syndrome These findings shed insights into disease mechanisms and facilitated the identification of new biomarkers that can help in diagnosis prognosis and development of novel clinical therapeutic approaches
