The Creative Enterprise of Mathematics Teaching Research Bronislaw Czarnocha, William Baker, Olen Dias, Vrunda Prabhu, 2016-07-28 The Creative Enterprise of Mathematics Teaching Research presents the results and methodology of work of the teaching research community of practice of the Bronx TR Team of the Bronx It has a twofold aim of impacting both teachers of Mathematics and researchers in Mathematics Education This volume can be used by teachers of mathematics who want to use research to reflect upon and to improve their teaching craft as well as by researchers who are interested in uncovering riches of classroom learning teaching for research investigations This book represents the results of a collaboration of instructors discussing their own instruction research analyzed through a conceptual framework obtained via the synthesis of creativity research and educational learning theories based upon the work of Piaget and Vygotsky The editors see an urgent need for creative synthesis of research and teaching an example of which is presented in the book Two central themes of the book are the methodology of TR NYCity model and creativity more precisely creativity of the Aha moment formulated by Arthur Koestler 1964 in a very profound but little known theory of bisociation exposed in his work The Act of Creation Incorporation of the theory of bisociation into classroom teaching of mathematics provides the key to enable students who may struggle with mathematics to engage their own creativity become involved in their learning process and thus reach their full potential of excellence Creativity in teaching remedial mathematics is teaching gifted students how to access their own giftedness

3+1 Formalism in General Relativity Éricourgoulhon, 2012-02-29 This graduate level course based text is devoted to the 3+1 formalism of general relativity which also constitutes the theoretical foundations of numerical relativity The book starts by establishing the mathematical background differential geometry hypersurfaces embedded in space time foliation of space time by a family of space like hypersurfaces and then turns to the 3+1 decomposition of the Einstein equations giving rise to the Cauchy problem with constraints which constitutes the core of 3+1 formalism The ADM Hamiltonian formulation of general relativity is also introduced at this stage Finally the decomposition of the matter and electromagnetic field equations is presented focusing on the astrophysically relevant cases of a perfect fluid and a perfect conductor ideal magnetohydrodynamics The second part of the book introduces more advanced topics the conformal transformation of the 3 metric on each hypersurface and the corresponding rewriting of the 3+1 Einstein equations the Isenberg Wilson Mathews approximation to general relativity global quantities associated with asymptotic flatness ADM mass linear and angular momentum and with symmetries Komar mass and angular momentum In the last part the initial data problem is studied the choice of spacetime coordinates within the 3+1 framework is discussed and various schemes for the time integration of the 3+1 Einstein equations are reviewed The

prerequisites are those of a basic general relativity course with calculations and derivations presented in detail making this text complete and self contained Numerical techniques are not covered in this book **The software catalog**

microcomputers Menu (Firm) (Fort Collins, Colo.),1989 **Discovering Mathematics with Maple** R.J. Stroeker,J.F. Kaashoek,2012-12-06 his book grew out of the wish to let students of econometrics get acquainted T with the powerful techniques of computer algebra at an early stage in their curriculum As no textbook available at the time met our requirements as to content and presentation we had no other choice than to write our own course material The try out on a group of 80 first year students was not without success and after adding some necessary modifications the same material was presented to a new group of students of similar size the year after Some more adjustments were made and the final result now lies before you Working with computer algebra packages like Derive Mathematica and Maple over many years convinced us of the favourable prospects of computer algebra as a means of improving the student s understanding of the difficult concepts on which mathematical techniques are often based Moreover advanced mathematical ed ucation be it for mathematics itself or for mathematical statistics operations research and other branches of applied mathematics can greatly profit from the large amount of non trivial mathematical knowledge that is stored in a computer algebra system Admittedly the fact remains that many a tough mathematical problem such as solving a complicated non linear system or obtaining a finite ex pression for a multiple parameter integral can not easily be handled by computer algebra either if at all
