Tucker,V. Paul Wright,2009-07-17 Carbonate rocks limestones and dolomites constitute a major partof the geological column and contain not only 60% of the world sknown hydrocarbons but also host extensive mineral deposits Thisbook represents the first major review of carbonate

sedimentology since the mid 1970s. It is aimed at the advanced undergraduate postgraduate level and will also be of major interest to geologists working in the oil industry. Carbonate Sedimentology is designed to take the reader from the basic aspects of limestone recognition and classification through to an appreciation of the most recent developments such as large scale facies modelling and isotope geochemistry. Novel aspects of the book include a detailed review of carbonate mineralogy, non marine carbonate depositional environments and an in depth look at carbonate deposition and diagenesis through geologic time. In addition the reviews of individual depositional systems stress a process based approach rather than one centered on simple comparative sedimentology. The unique quality of this book is that it contains integrated reviews of carbonate sedimentology and diagenesis within one volume.
