ABSTRACT

Risk management is an activity, which integrates recognition of risk, risk assessment, developing strategies to manage it, and mitigation of risk using managerial resources. Some traditional risk managements are focused on risks stemming from physical or legal causes. (For example, natural disasters or fires, accidents, death). It may refer to numerous types of threats caused by environment, technology, humans, organizations and politics. Objective of risk management is identifying the risks and finding solution to reduce them. The paper describes the different steps in risk management process which methods are used in the different steps [Reference 2].

INTRODUCTION

Risk management is one part in information security. All managers are expected to play a role in the risk management process, but information security managers are expected to play the largest roles. Before studying risk management detail we should have some idea on risks and difference between hazard and risks. Hazard is any source of potential damage, harm or adverse health effects on something or someone under certain conditions at work. Basically hazard can cause harm or adverse effects. Risk is the chance of probability that a person will be harmed or experiences an adverse effect if exposed to a hazard.

Risk management is a process of identifying, analyzing, treating and monitoring the risks involved in any activity or process. This process is an expected responsibility for managers in all organizations. Risk management is carried out by mainly two components risk identification, risk control [Reference 1]. Risk identification: It is the process of identifying and documenting the risks. Following steps carries it out.

Risk assessment

Inventorizing assets Classifying assets Identifying threats and vulnerabilities Risk control: It is the process of applying controls to reduce the risks to an organization's data and information systems. This process carries out the following steps. Selecting strategy Justifying controls. Risk identification

A risk management strategy calls on information security professionals to identify, classify and prioritize the organization's information assets. Once that has been done, the threat identification process begins. Each information asset is examined to identify vulnerabilities, and when vulnerabilities are found, controls are identified and assed regarding their capability to limit possible losses should an attack occur. Asset identification and value assessment

The iterative process of identifying assets and assessing their value begins with the identification of the elements of an organization's systems, people, procedures, data/information, software, hardware, and networks.

Classifying assets

In addition to the identifying assets, it is advisable to classify them with respect to their security needs. For example, data could be classified as confidential data, internal data, and public data. No matter how an organization chooses to classify the components of its system, the components must be specific enough to allow the creation of various priority levels. The components then can be ranked according to criteria established by the categorization. The categories themselves should be comprehensive and mutually exclusive. Comprehensive means that all the information assets should fit in the list somewhere; Mutually exclusive means that each information asset should...

Water Resources of Pakistan Muhammad Arif Watto, Michael Mitchell, Safdar Bashir, 2021-03-25 This book presents the first comprehensive assessment of water resources in Pakistan including surface water resources and groundwater resources. It gives a detailed overview of issues and challenges related to water which have not been adequately addressed e.g. water resource vulnerability to climate change, groundwater depletion and contamination and water governance etc. It includes a collection and compilation of unpublished and scattered data from the archives and repositories of various national institutions and organization. Given the literature dearth, this book will not only be a comprehensive assessment of water resources in Pakistan but can also can as outstanding textbook on water resource management in Pakistan. It will attract a great range of readership including water specialists, researchers, undergraduate and post graduate students and policy makers from Pakistan as well as from overseas.

[Flood Risk Management in Europe](#) Selina Begum, Marcel J.F. Stive, Jim W. Hall, 2007-06-17 In recent years major floods have occurred across Europe causing serious damages and huge financial implications. Flood risk and vulnerability is increasing with increased frequency of occurrence of extreme events due to climate change, changes in land use, encroachment into floodplains and increasing economic value of assets and businesses. Human lives, property, environment and socio economics are at increasing risk due to flooding. Recent alarming events in Central Europe, UK and The Netherlands have provided renewed impetus to the development of improved policies and techniques for flood risk management across Europe. Sharing of knowledge and understanding of the practical problems, dilemmas and challenges will aid in the development and implementation of new technologies and strategies of the challenging issues of flood risk management in Europe. This valuable edition brings together 26 peer reviewed articles on technical, socio economic, environmental and policy aspects of flood risk management. These articles contribute to the five sections with the general themes: i) flood risk management practice, ii) flood events and impacts, iii) flood analysis and modelling, iv) flood forecasting and v) flood risk management policy.
