*Cloud Computing: Reign Of Access* Binayaka Mishra,2017-06-29 A detailed description of the further growth of cloud has been deduced by Oracle CEO Larry Wilson on 2012 who once re launched John McCarthy s 1961 MIT theory on 2008 and later called the same as gibberish first introduced cloud to the entire world as platform based product There are two versions of Oracle s new IaaS cloud One is a public cloud similar to the kind of clouds offered by Amazon

Rackspace HP and others where the hardware is located in Oracle's data centres. It includes compute services and storage services. Ellison said. The second is the so called Oracle Private cloud where a replica of Oracle's public cloud is put in the customer's own data centre. Oracle would still own the hardware and be responsible for running it, securing it and updating it. The third announcement was that Oracle invented a brand new kind of database designed specifically for the cloud. It's dubbed Oracle 12c, the c stands for cloud and it lets multiple companies share the same database. Or a company with many Oracle databases can use 12c to easily consolidate all them onto one set of server storage hardware. The Oracle 12c database will be available in 2013. The fourth announcement was for a new hardware product that is a direct competitor to rival SAP's HANA database. Ellison introduced Exadata x3 and says that it will be bigger and faster than HANA as well as rival server products from IBM and HP but that it will cost far less. Exadata x3 prices start at 200,000.

**Artificial Intelligence in Information and Communication Technologies, Healthcare and Education** Parikshit N Mahalle, Rajendra S Talware, Ganesh C Patil, Sachin R Sakhare, Yogesh H Dandawate, Pravin R Futane, 2022-12-27. Artificial Intelligence in Information and Communication Technologies, Healthcare and Education: A Roadmap Ahead is designed as a reference text and discusses inter-dependability, communication and effective control for the betterment of services through artificial intelligence (AI) as well as the challenges and path ahead for AI in computing and control across different domains of business and human life. The book accommodates technologies and application domains including backbone hardware systems and methods for deployment which help incorporating intelligence through different supervised and probabilistic learning approaches. Features: The book attempts to establish a connection between hardware, software, technologies and algorithmic intelligence for data analysis and decision support in domains such as healthcare, education and other aspects of business and mobility. It presents various recent applications of artificial intelligence in information and communication technologies such as search and optimization methods, machine learning, data representation and ontologies and multi-agent systems. The book provides a collection of different case studies with experimentation results rather than mere theoretical and generalized approaches. Covers most of the applications using the trending technologies like machine learning, ML, data science, DS, Internet of Things (IoT) and underlying information and communication technologies. The book is aimed primarily at advanced undergraduates and postgraduate students studying computer science, computer applications and information technology. Researchers and professionals will also find this book useful.
