Panda, 2016-04-01 Asbestos is the generic term for a group of naturally occurring fibrous minerals with high tensile strength, flexibility and resistance to thermal, chemical and electrical conditions. Asbestos fibers are of high tensile strength, flexible, heat and chemical resistance and good frictional properties. Cement is the most essential raw material in any kind of construction activity. Ceramics, also known as fire clay, is an inorganic non-metallic solid article which is produced by the art or technique of heat and subsequent cooling. Limestone is a sedimentary rock mainly composed of calcium carbonate ( $\text{CaCO}_3$ ). It is the principal source of crushed stone for construction, transportation, agriculture and industrial uses. Emerging applications in commercial sectors such as asbestos cement and ceramic are poised to fuel demand in the coming years. Growing demand for limestone in the production of cement as well as in several other chemicals that are used in the production of high-value everyday products offers significant opportunities for growth. Global limestone consumption is projected to reach 5.7 billion tons and expected to grow at an average annual rate of 4.5% in coming years. Presently, cement production is 330 million tonnes and expected to double to reach almost 550 million tonnes in future. The major contents of the book are asbestos monitoring and identification of air-borne asbestos in industrial applications, asbestos cement
