

Project Charter

Project Name:	Data Center and Servers
Project Team Leads:	Guy Falsetti, JJ Ulrich
Project Managers:	Kris Halter
TeamDynamix Project Number:	241095

Project Overview

To consolidate the 36+ server rooms and closets on campus into a target of 4 centrally governed, managed, and supported multi-tenant data centers.

Project Purpose and Benefits to Campus

Several factors are currently converging to make this an opportune time for the University of Iowa to review its model for housing, securing, and managing its computing servers and equipment. They are:

1. The commissioning of the Information Technology Facility (ITF) on the Research Park/Oakdale campus provides highly efficient enterprise data center space previously not available.
2. The University's "2020 Vision" Sustainability Targets include a goal to achieve net-negative energy growth from 2010 to 2020 despite projected campus growth. Reduced IT energy use is expected to contribute to this.
3. Technologies such as virtualization and remote server management have matured and can be more widely deployed.
4. University efficiency initiatives over several years have put continuing pressure on IT staff resources, so changes that free up IT staff to work on higher-priority IT needs are recognized as necessary.

Project Scope Statement

1. Maintain a thorough inventory, evaluation, and classification of data center and server room spaces across campus, computing equipment housed in them, and services provided.
 - a. Retire – If server/service is no longer is needed, retire the server or service.
 - b. Consolidate – If the service can be migrated to an existing service, consolidate.
 - c. Virtualize – Evaluate the current workload, CPU, memory, and disk requirements. If software will support virtualization, move to a virtual guest on central server farm.
 - d. Cloud – Evaluate the current workload, CPU, memory, and disk requirements. If the software will support a cloud provider move the service to the cloud.
 - e. Replace – Evaluate the current hardware age and configuration. If out of warranty and/or not in a configuration suitable for the data center then replace the hardware with new equipment.
 - f. Migrate – If all other options are exhausted. Move the equipment.
2. Develop process for moving Non-High Performance Computing (HPC) clusters. A team would look at evaluating each server/service.
3. Gather current energy usage or calculate estimates in the current location.
4. Develop data center services, operational models, and SLA's that facilitate consolidating data
