Graph Vision Theodora Vardouli, 2024-11-12 How a protean mathematical object the graph ushered in new images tools and infrastructures for design and catalyzed a digital future for architecture In *Graph Vision* Theodora Vardouli offers a fresh history of architecture s early entanglements with modern mathematics and digital computing by focusing on a hidden protagonist the graph Fueled by iconoclastic sentiments and skepticism of geometric depiction architects she explains turned to the skeletal underpinnings of their work and with it the graph as a site of representation operation and political possibility Taking the reader on an enthralling journey through a polyvalent mathematical entity Vardouli combines close readings of graphs architectural manifestations as images tools and infrastructures for design with original archival work on research centers that spearheaded mathematical and computational approaches to architecture Structured thematically *Graph Vision* weaves together archival findings on influential research groups such as the Land Use Built Form Studies Center at the University of Cambridge the Center for Environmental Structure at Berkeley the Architecture Machine Group at the Massachusetts Institute of Technology among others as well as important figures who led or worked in proximity to these groups including Lionel March Christopher Alexander and Yona Friedman Together this material chronicles the emergence of both a new way of seeing and a new prospect for the discipline that prefigured its digital future of a graph vision Vardouli argues that this vision was one of vacillation toward visual appearance Digital approaches to architecture she ultimately reveals were founded on a profound ambivalence toward the visual realm endemic to mid twentieth century architectural and mathematical modernisms

Active Computer Vision by Cooperative Focus and Stereo Eric P. Krotkov, 2012-12-06 This book addresses an area of perception engineering which deals with constructive processes A model of the environment is analyzed using the information acquired from multiple viewpoints of multiple disparate sensors at multiple time instants Although the role of successive model building and active exploration of the environment as is discussed in this book is of great importance only a few researchers of machine perception have thus far addressed the problem in these directions Krotkov's book which is a modification and continuation of his highly successful dissertation focuses on active exploratory sensing in the context of spatial layout perception He uses stereo and focus to obtain distance By information and to eventually develop cooperative combining techniques means of a stereo system with verging cameras it is demonstrated that the distance measurements can be significantly improved by combining two sources In addition the problem of merging information from the multiple views is discussed in detail As the field of perception engineering seems to be of growing scientific and applied importance both practitioners and researchers in machine perception will find this book a valuable addition to their libraries Ramesh Jain Series Editor Acknowledgements I would like to thank Professor Ruzena Bajcsy for her constant encouragement and guidance during the five years of research leading to the dissertation upon which this book is based Without her help in all matters this work would never have been possible
