The engines are fitted with a heat exchanger for freshwater. This exchanger is located in the engine block, cylinder heads and exhaust manifold. The exhaust manifold cooling panel is designed so that it also acts as the exhaust pipe.

The engines are lubricated by means of a pressure lubricating system, where an oil pump supplies lubricating oil to all the lubricating points in the correct quantities at all engine speeds. The pistons in the 10-type engines are

cooled by oil that flows through special cooling holes in the engine block.

The cover part of the pressure lubricating oil is an oil separator.

The fuel system is well protected from interruptions during running by means of an electric, replaceable fuel filter. On the TAMD60 engines the fuel injection pump is large mounted under the other engine from the pump fitted on a bracket.
