

Fossil Fuel Formation

300-400 Million Years Ago

50-100 Million Years Ago

Today

Millions of Years Ago, organisms in an ancient ocean died. Their remains fell to the ocean floor.

Over time, layers of sediment piled on top of the remains of the dead organisms. This formed layers of sedimentary rock.

Heat and pressure from the weight of the layers turned the remains into a fossil fuel called oil.

successful inclusive lessons for all pupils Teaching Elementary Science William K. Esler, Mary K. Esler, 1981 **Monthly Catalog of United States Government Publications** ,1994 *English Teaching Forum* ,2006 Preparing Agriculture and Agriscience Educators for the Classroom Thoron, Andrew C., Barrick, R. Kirby, 2022-06-24

The preparation of school based agriculture teachers has been a part of public education for over 100 years. However, there is a lack of texts available that address the components of teacher education in agriculture, including teacher preparation and related activities. Further study that goes beyond concepts to include practice and applications is required in order to further develop educators in this sector. *Preparing Agriculture and Agriscience Educators for the Classroom* provides an up to date consideration of the best practices for developing and enhancing a complete teacher preparation program and highlights and showcases concepts and applications. It is a mainstay for teacher education and teacher preparation in agriculture and is applicable anywhere in the world where teaching agriculture exists. Covering a range of topics such as field experiences and student learning, this reference work is ideal for researchers, scholars, practitioners, academicians, administrators, instructors, and students.

The Speed of Green, Grade 8 Carla C. Johnson, Janet B. Walton, Erin E. Peters-Burton, 2023-03-30

What if you could challenge your eighth graders to design a racing vehicle with minimum environmental impact while exploring the role of renewable and non renewable energy sources? With this volume in the STEM Road Map Curriculum Series, you can. *The Speed of Green* outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines. Like the other volumes in the series, this book is designed to meet the growing need to infuse real world learning into K-12 classrooms. This interdisciplinary eight lesson module uses project and problem based learning to help students explore the potential role of renewable and non renewable energy sources in transportation with an emphasis on the auto industry. Using their understanding of the engineering design process (EDP), scientific concepts, and environmental conservation considerations, student teams will develop a plan for a competitive automobile racing team to fuel its vehicle with minimal environmental impact. To support this goal, students will do the following:

- Identify finite energy resources and distinguish between these and renewable energy sources and identify implications of the use of those fuel sources on the environment.
- Conduct life cycle analyses (LCAs) of various fuel sources and apply the results to make decisions about the effects of various fuel sources.
- Identify several ways that carbon based fuels have impacted the U.S. economy and foreign relations.
- Identify the effects of human activities on the biosphere with an emphasis on the effects of the widespread use of carbon based fuels.
- Apply the engineering design process (EDP) to solve a problem and design and build a small scale electric vehicle.
- Synthesize their learning and working collaboratively by creating and presenting a plan for a race team that minimizes its environmental impact.
- Create an engaging presentation incorporating oral presentations and visual displays to present projects to an audience of peers, teachers, and industry professionals.
