Principles and Practices of Air Pollution Control and Analysis J. R. Mudakavi, 2010 *Principles and Practices of Air Pollution Control and Analysis* is a ready reference book for scientists and technologists The subject matter has been presented in five sections and 25 chapters The first section introduces the student to air pollution and the second section deals with the current air pollution control technologies The third section is informative in character and presents environmental issues related to air pollution such as acid rain global climatic change CFCs and ozone layer etc The fourth

section presents management aspects of air pollution and the final section has been dedicated to instrumentation and chemicals. The publication has been structured in a way that promotes a clear understanding of the subject matter with illustrated examples. The book constitutes an essential reading for undergraduate and postgraduate students of Environmental Science and Engineering and provides an insight into the chemistry of air pollution. It will also be of interest for professionals and consultants working in the field of air pollution control.

Environmental Education Trilochan S. Bakshi, Zev Naveh, 2013-03-09. The environmental movement of the 1960s made educationists in some parts of the world aware of the significance and importance of ecology in curricula at all levels of education from kindergarten to post secondary. A great deal of progress was made in the early 1970s in incorporating environmental awareness programs into educational systems so that what was once considered a fad was gradually becoming a part of formal education in a number of institutions especially in Canada and the U S A. It was therefore appropriate that an international scientific body devote some time to the issue of ecology in education. Early in 1976 I suggested to the International Association for Ecology Inteco1 that a symposium on Environmental Education be included in the program of the Second International Congress of Ecology scheduled to be held in Jerusalem in September 1978. In the first draft program of the Congress the topic was included as a poster session. I considered this inadequate and appealed to the Congress Steering Committee to focus greater attention on environmental education. The first draft program contained phrases like utilization of resources conservation problems environmental monitoring and irreversible changes. These phrases more or less assumed that people in general understood ecological principles. Literature on environmental education seems to suggest that a wide gap separated most of the professional ecologists from a large portion of mankind primarily because we the ecologists have paid scant attention to the ecological education of world's citizens.
