Progress In Social Psychiatry In Japan:

Progress in Social Psychiatry in Japan Yoshibumi Nakane, 2012-10-30 Social psychiatry is a multidisciplinary field analyzing mechanisms of mental health issues comprehensively to contribute to society using the findings. Those findings include biological, psychological, and social aspects and they are based on psychiatry and connected with a wide variety of academic fields including psychology, sociology, law, economics, and religious studies. Epidemiological research in psychiatry is a field of study in patients with psychiatric disorder attempting to investigate causes to develop clinical applications of the results and to determine applications to health services plans for individuals and/or communities. They are both foundation for understanding biopsychosocial view in psychiatry but not many comprehensive volumes covering the topic were not available until now. This book is thus a unique comprehensive reference with evidence-based approach to provide concise summary of researches for such as schizophrenia, affective disorders, psychiatric disorders in the general practice setting, and disaster psychiatry especially for the case of atomic bomb diseases. The studies were mostly carried out in the region of Nagasaki; the prefecture experienced a nuclear attack at the time of World War II. Psychiatric findings in mental health problems among atomic bomb survivors and sufferers in Nagasaki have been established and Nagasaki is the only area that fulfills the conditions of the subject of the study of psychiatric epidemiology and social psychiatry which is going to be described in this book. This book provides a valuable resource not only for physicians and researchers in the field of psychiatry and mental health but for people who work for mental health welfare department. **Progress in Asian Social**

New Developments in Eating

Disorders Research Pamela I. Swain, 2006 The abundance of food in the developed countries of the world has seemingly spawned an epidemic of disorders connected to the food. Extremes such as intensive concern about one's body image and total disregard for it have resulted in countries which contain enormous segments of the population who are either obese and proud of it or bordering on anorexia nervosa. This new book gathers state of the art research from leading scientists throughout the world which offers important information on understanding the underlying causes and discovering the most effective treatments for eating disorders.

New Developments in Psychometrics Haruo Yanai, Akinori Okada, Kazuo Shigemasa, Yutaka Kano, Jacqueline J. Meulman, 2013-06-29 At the International Meeting of the Psychometric Society in Osaka Japan more than 300 participants from 19 countries gathered to discuss recent developments in the theory and application of psychometrics. The 80 papers collected here provide a valuable source of information for all who are concerned with psychometrics: mathematical and statistical applications and data analysis in psychological and behavioral sciences.

Handbook of Japan-United States Environment-Behavior Research Jack Demick, T. Takahashi, Seymour Wapner, C. Takiji Yamamoto, 2013-11-11 This volume is an outgrowth of research on the relations between human beings and their environments which has developed internationally. This development is evident in environment behavior research studies conducted in countries other than the United States. See Stokols and Altman 1987 for examples of such work in Australia, Japan, France, Germany, the Netherlands, Sweden, the United Kingdom, the former Soviet Union, and Latin and North America. The international development of this research area is also evident in the establishment of professional organizations in different countries such as the Environment Behavior Design Research Association (EDRA) in the United States, the Man Environment Research Association (MERA) in Japan, the International Association for People Environment Studies (IAPS) in Great Britain, and the People and Physical Environment Research Association (PAPER) in Australia. This volume focuses on environment behavior research within Japan and the United States as well as cross cultural studies involving both countries. As we note in detail in Chapter 1, the conference on which the work presented herein is based was preceded by three Japan United States conferences on environment behavior research, the first of which took place in Tokyo in 1980. As currently conceived, the present volume stands alone as a compendium of a significant proportion of cross cultural research on environment behavior relations in Japan and the United States that has been developing over the last 15 years. As such, we envision the volume as a basic interdisciplinary reference for anthropologists, architects, psychologists, sociologists, urban planners, and environmental geographers.
