Remote Instrumentation and Virtual Laboratories Franco Davoli,Norbert Meyer,Roberto Pugliese,Sandro Zappatore,2010-03-10 Accessing remote instrumentation worldwide is one of the goals of e Science The task of enabling the execution of complex experiments that involve the use of distributed scientific instruments must be supported by a number of different architectural domains which inter work in a coordinated fashion to provide the necessary functionality These domains embrace the physical instruments the communication network interconnecting the distributed systems the service oriented abstractions and their middleware The Grid paradigm or more generally the Service Oriented Architecture SOA viewed as a tool for the integration of distributed resources plays a significant role not only to manage computational aspects but increasingly as an aggregator of measurement instrumentation and pervasive large scale data acquisition platforms In this context the functionality of a SOA allows managing maintaining

and exploiting heterogeneous instrumentation and acquisition devices in a unified way by providing standardized interfaces and common working environments to their users but the peculiar aspects of dealing with real instruments of widely different categories may add new functional requirements to this scenario On the other hand the growing transport capacity of core and access networks allows data transfer at unprecedented speed but new challenges arise from wireless access wireless sensor networks and the traversal of heterogeneous network domains The book focuses on all aspects related to the effective exploitation of remote instrumentation and to the building complex virtual laboratories on top of real devices and infrastructures These include SOA and related middleware high speed networking in support of Grid applications wireless Grids for acquisition devices and sensor networks Quality of Service QoS provisioning for real time control measurement instrumentation and methodology as well as metrology issues in distributed systems     LabVIEW Rick Bitter,Taqi Mohiuddin,Matt Nawrocki,2000-08-10 The graphical nature of LabVIEW makes it ideal for test and measurement applications and its use brings significant improvements in productivity over conventional programming languages However comprehensive treatments of the more advanced topics have been scattered and difficult to find until now LabVIEW Advanced Programming Techniques of     **Design, Manufacturing And Mechatronics - Proceedings Of The 2015 International Conference (Icdmm2015)** A Mehran Shahhosseini,2015-09-23 This book brings together one hundred and seventy nine selected papers presented at the 2015 International Conference on Design Manufacturing and Mechatronics ICDMM2015 which was successfully held in Wuhan China during April 17 18 2015 The ICDMM2015 covered a wide range of fundamental studies technical innovations and industrial applications in advanced design and manufacturing technology automation and control system communication system and computer network signal and image processing data processing and intelligence system applied material and material processing technology power and energy technology and methods for measure test detection and monitoring applied mechatronics technology and methods for ship navigation and safety and other engineering topics All papers selected here were subjected to a rigorous peer review process by at least two independent peers The papers were selected based on innovation organization and quality of presentation The proceedings should be a valuable reference for scientists engineers and researchers interested in design manufacturing and mechatronics as well as graduate students working on related technologies     *Advancements in Antenna Measurement* Martin Krchňák,Marek Češkovič,Pavol Kurdel,Anton Panda,2023-12-18 This book is a pioneering exploration of a new form of high frequency attenuation chamber that has the potential to revolutionize antenna measurement techniques The authors present an innovative concept that leverages the classical principle of changing the polarization of radio waves eliminating the need for traditional non reflection chambers By analyzing experimental results and searching for the optimal shape and composition of a depolarization panel this monograph provides valuable insights into creating a non reflective environment for accurately measuring the directional properties of antennas The book delves into the methodology of frequency analysis

optimization of the depolarization panel and the creation of a measuring workplace using this panel It highlights the crucial attenuation phenomenon of suppressing cross polarization coupling between transmitting and receiving antennas enabling antenna measurements in any laboratory environment With its promising results and practical applications in antenna technology this publication offers a compelling and cutting edge approach to antenna measurement that will captivate researchers engineers and professionals in the field      **Data Acquisition Techniques Using PCs** Howard
