 Biochemistry and Physiology** ,1994 Insect Olfaction Bill S. Hansson,2013-06-29 JOHN G HILDEBRAND Research on  
 insect olfaction is important for at least two reasons First the olfactory systems of insects and their arthropod kin are experi  
 mentally favourable models for studies aimed at learning about general principles of olfaction that apply to vertebrates and  
 invertebrates alike Detailed comparisons between the olfactory pathways in vertebrates and insects have revealed striking  
 similarities of functional organisation physiology and development suggesting that olfactory information is processed  
 through neural mechanisms more similar than different in these evolutionarily remote creatures Second insect olfaction  
 itself is important because of the economic and medical impact of insects that are agricultural pests and disease vectors as  
 well as positive impact of beneficial species such as the bees and moths responsible for pollination and production of honey  
 The harm or benefit attributable to an insect is a function of what it does that is of its behaviour which is shaped by sensory  
 information Often olfaction is the key modality for control of basic insect behaviour such as orientation and movement  
 toward and interactions with potential mates appropriate sites for oviposition and sources of food Not surprisingly therefore  
 much work on insect olfaction has been motivated by long term hopes of using knowledge of this pivotal sensory system to  
 design strategies for monitoring and managing harmful species and fostering the welfare of beneficial ones **The Journal

 can respond to the end of abundance with old ideas or adopt new tools specifically designed to address water scarcity In this  
 book David Zetland describes the impact of scarcity on our many water uses how the institutions of abundance fail in scarcity
