Controversies in the Management of Lymphomas John M. Bennett, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Molecular Pathology of Endocrine Diseases Jennifer L. Hunt, 2010-05-17 The past two decades have seen an ever accelerating growth in knowledge about molecular pathology of human diseases which received a large boost with the sequencing of the human genome in 2003 Molecular diagnostics molecular targeted therapy and genetic therapy are now routine in many medical centers The molecular field now impacts every field in medicine whether clinical research or routine patient care There is a great need for basic researchers to understand the potential clinical implications of their research whereas private practice clinicians of all types general internal medicine and internal medicine specialists medical oncologists radiation oncologists surgeons pediatricians family practitioners clinical investigators pathologists and medical laboratory directors and radiologists require a basic understanding of the fundamentals of molecular pathogenesis diagnosis and treatment for their patients Traditional textbooks in molecular biology deal with basic science and are not readily applicable to the medical setting Most medical textbooks that include a mention of molecular pathology in the clinical
