Elayn Martin-Gay, 2004-07 **Recent Stability Issues for Linear Dynamical Systems** Nicola Guglielmi, Christian Lubich, Nicolas Gillis, Volker Mehrmann, Punit Sharma, Bart Vandereycken, 2024-12-13 This book concerns matrix nearness problems in the framework of spectral optimization It addresses some current research directions in spectral based stability studies for differential equations with material on ordinary differential equations ODEs differential algebraic equations and dynamical systems Here stability is interpreted in a broad sense which covers the need to develop stable and reliable algorithms preserving some qualitative properties of the computed solutions methodologies which are helpful to assess the onset of potential instabilities or loss of robustness and tools to determine the asymptotic properties of the solution or its discretization The topics considered include the computation of robustness measures for linear problems the use of low rank ODEs to approximate such measures via gradient systems the regularity stability passivity and controllability analysis of structured linear descriptor systems and the use of acceleration techniques to deal with some of the presented computational problems Although the emphasis is on the numerical study of differential equations and dynamical systems the book will also be of interest to researchers in matrix theory spectral optimization and spectral graph theory as well as in dynamical systems and systems theory **Handbook of Research on Equity in Computer Science in P-16 Education** Keengwe, Jared, Tran, Yune, 2020-11-13 The growing trend for high quality computer science in school curricula has drawn recent attention in classrooms With an increasingly information based and global society computer science education coupled with computational thinking has become an integral part of an experience for all students given that these foundational concepts and skills intersect cross disciplinarily with a set of mental competencies that are relevant in their daily lives and work While many agree that these concepts should be taught in schools there are systematic inequities that exist to prevent students from accessing related computer science skills The Handbook of Research on Equity in Computer Science in P 16 Education is a comprehensive reference book that highlights relevant issues perspectives and challenges in P 16 environments that relate to the inequities that students face in accessing computer science or computational thinking and examines methods for challenging these inequities in hopes of allowing all students equal opportunities for learning these skills Additionally it explores the challenges and policies that are created to limit access and thus reinforce systems of power and privilege The chapters highlight issues perspectives and challenges faced in P 16 environments that include gender and racial imbalances population of growing computer science teachers who are predominantly white and male teacher preparation or lack of faculty expertise professional development programs and more It is intended for teacher educators K 12 teachers high school counselors college faculty in the computer science department school administrators curriculum and instructional designers directors of teaching and learning centers
